The Impacts of Racism and Bias on Black People Pursuing Careers in Science, Engineering, and Medicine National Academies of Sciences, Engineering, and Medicine 2020-12-18 Despite the changing demographics of the nation and a growing appreciation for diversity and inclusion as drivers of excellence in science, engineering, and medicine, Black Americans are severely underrepresented in these fields. Racism and bias are significant reasons for this disparity, with detrimental implications on individuals, health care organizations, and the nation as a whole. The Roundtable on Black Men and Black Women in Science, Engineering, and Medicine was launched at the National Academies of Sciences, Engineering, and Medicine in 2019 to identify key levers, drivers, and disruptors in government, industry, health care, and higher education where actions can have the most impact on increasing the participation of Black men and Black women in science, medicine, and engineering. On April 16, 2020, the Roundtable convened a workshop to explore the context for their work; to surface key issues and questions that the Roundtable should address in its initial phase; and to reach key stakeholders and constituents. This proceedings provides a record of the workshop.

How to Be Pre-Med Suzanne M. Miller 2013 How To Be Pre-Med assists high school, college, and non-traditional students interested in becoming physicians by describing the pre-med route from start to finish using the Six Buckets model Dr. Suzanne M. Miller developed through over a decade of medical school admissions advising. This guide is equally helpful to those hoping to pursue a medical career and to loved ones, such as parents, spouses, relatives, and friends, supporting a pre-med. Dr. Miller created How to be Pre-Med to serve as a prequel to the best-selling The Medical School Admissions Guide: A Harvard MD's Week-by-Week Admissions Handbook because readers frequently provided feedback wishing they had received similar expert guidance sooner in the pre-med process. How To Be Pre-Med covers all information required to excel as a pre-med and prepare for the medical school application process. It's best to read this book as soon as you decide to pursue the pre-med path to help strategize selection of undergraduate or post-baccalaureate experiences. Then return to it each year to assess how you are filling up the Six Buckets. Once you have decided to apply to medical school, pick up the latest edition of The Medical School Admissions Guide and follow the weekly steps required to create the best application possible to maximize your chances of admission.

Intern Sandeep Jauhar 2007-12-26 Intern is Sandeep Jauhar's story of his days and nights in residency at a busy hospital in New York City, a trial that led him to question our every assumption about medical care today. Residency—and especially the first year, called internship—is legendary for its brutality. Working eighty hours or more per week, most new doctors spend their first year asking themselves why they wanted to be doctors in the first place. Jauhar's internship was even more harrowing than most: he switched from physics to medicine in order to follow a more humane calling—only to find that medicine put patients' concerns last. He struggled to find a place among squadrons of cocky residents and doctors. He challenged the practices of the internship in The New York Times, attracting the suspicions of the medical bureaucracy. Then, suddenly stricken, he became a patient himself—and came to see that today's high-tech, high-pressure medicine can be a humane science after all. Now a thriving cardiologist, Jauhar has all the qualities you'd want in your own doctor: expertise, insight, a feel for the human factor, a sense of humor, and a keen awareness of the worries that we all have in common. His beautifully written memoir explains the inner workings of modern medicine with rare candor and insight.

Accessibility, Inclusion, and Action in Medical Education Association of American Medical Colleges 2018-03-09 To capture the current state of disability in medical education, the AAMC and the University of California, San Francisco, School of Medicine partnered to publish a new report drawn from the lived experiences of learners with disabilities. This publication weaves together major themes from interviews with 47 students, residents, and physicians with disabilities to identify cultural and structural barriers and catalyze institutional policies that support all qualified learners, regardless of disability, throughout the medical education continuum. The report highlights key considerations that leaders in academic medicine can implement to increase meaningful access for learners with disabilities, including: Catalog of Copyright Entries, Third Series Library of Congress. Core Entrustable Professional Activities for Entering Residency Association of American Medical Colleges 2014-05-28 This landmark publication published by the AAMC identifies a list of integrated activities to be expected of all M.D. graduates making the transition from medical school to residency. This guide delineates 13 Entrustable Professional Activities (EPAs) that all entering residents should be expected to perform on day 1 of residency without direct supervision regardless of specialty choice. The Core EPAs for Entering Residency are designed to be a subset of all of the graduation requirements of a medical school. Individual schools may have additional mission-specific graduation requirements, and specialties may have specific EPAs that would be required after the student has made the specialty decision but before residency matriculation. The Core EPAs may also be foundational to an EPA for any practicing physician or for specialty-specific EPAs. Update: In August 2014, the AAMC selected ten institutions to join a five-year pilot to test the implementation of the Core Entrustable Professional Activities (EPAs) for Entering Residency. More than 70 institutions, representing over half of the medical schools accredited by the U.S. Liaison Committee on Medical Education (LCME), applied to join the pilot, demonstrating the significant energy and enthusiasm towards closing the gap between expectations and performance for residents on day one. The cohort reflects the breadth and diversity of the applicant pool, and the institutions selected are intended to complement each other through the unique qualities and skills that each team and institution brings to the pilot. Faculty and Learners' Guide (69 pages) - Developing faculty: The EPA descriptions, the expected behaviors, and the vignettes are expected to serve as the foundation for faculty development. Faculty can use this guide as a reference for both feedback and assessment in pre-clinical and clinical settings.- Developing learners: Learners can also use this document to understand the core of what is expected of them by the time they graduate. The EPA descriptions themselves delineate the expectations, while the developmental progression laid out from pre-entrustable to entrustable behaviors can serve as the roadmap for achieving them.

Sánchez 2020-01-14 This first-of-its-kind book for underrepresented racial and ethnic minorities (URM), women, and sexual and gender minorities in medicine offers the core knowledge and skills needed to achieve a well-planned, fulfilling career in academic medicine. The knowledge and skills provided by the esteemed co-authors, successful diverse pre-faculty, and junior and senior academicians, are complemented by their inspirational and motivational stories. In the Nation's Compelling Interest Institute of Medicine 2004-06-29 The United States is rapidly transforming into one of the most racially and ethnically diverse nations in the world. Groups commonly referred to as minorities-including Asian Americans, Pacific Islanders, African Americans, Hispanics, American Indians, and Alaska Natives-are the fastest growing segments of the population and emerging as the nation's majority. Despite the rapid growth of racial and ethnic minority groups, their representation among the nation's health professionals has grown only modestly in the past 25 years. This alarming disparity has prompted the recent creation of initiatives to increase diversity in health professions. In the Nation's Compelling Interest considers the benefits of greater racial and ethnic diversity, and identifies institutional and policy-level mechanisms to garner broad support among health professions leaders, community members, and other key stakeholders to implement these strategies. Assessing the potential benefits of greater racial and ethnic diversity among health professionals will improve the access to and quality of healthcare for all Americans.
