Brands and Branding Rita Clifton 2009-04-01 With contributions from leading brand experts around the world, this valuable resource delineates the case for brands (financial value, social value, etc.) and looks at what makes certain brands great. It covers best practices in branding and also looks at the future of brands in the age of globalization. Although the balance sheet may not even put a value on it, a company's brand or its portfolio of brands is its most valuable asset. For well-known companies it has been calculated that the brand can account for as much as 80 percent of their market value. This book argues that because of this and because of the power of not-for-profit brands like the Red Cross or Oxfam, all organisations should make the brand their central organising principle, guiding every decision and every action. As well as making the case for brands and examining the argument of the anti-globalisation movement that brands are bullies which do harm, this second edition of Brands and Branding provides an expert review of best practice in branding, covering everything from brand positioning to brand protection, visual and verbal identity and brand communications. Lastly, the third part of the book looks at trends in branding, branding in Asia, especially in China and India, brands in a digital world and the future for brands. Written by 19 experts in the field, Brands and Branding sets out to provide a better understanding of the role and importance of brands, as well as a wealth of insights into how one builds and sustains a successful brand.

The Garden as Architecture Toshiro Inaji 1998 Gardens and their related architecture have always been designed in Japan, China, and Korea as a single, cohesive environment. The particular forms that these environments took over the centuries naturally reflect each country's differing aesthetic principles, but were also governed by other concerns - from religious beliefs and social structure to simple spatial or climatic constraints. In his exploration of the history of garden design in the Far East, Toshiro Inaji offers a fascinating study of changing cultural and aesthetic values. The Garden as Architecture is the first book published in English to focus on the strikingly different interpretations made by these three countries - in their gardens and architecture - of the Buddhist, Confucianist, Taoist, and geomantic principles that have informed their cultures since ancient times. This pioneering study makes clear just how and why the approaches taken by neighboring countries were so different.

The Learning Industry Nell P. Eurich 1990 This study focuses on the connection between education and the world of work and the urgency of the endeavor to educate the work force. Part I considers the resources for adult learning in the United States, with a focus on the major providers outside the traditional education system. Technological resources that can extend educational opportunities and reach more workers are then analyzed. Examples of each medium's use are given, and its limitations and effectiveness for instruction are charted. One new development is given special attention: artificial intelligence as an aid in training and education. Part II describes workers' training opportunities. It looks first at the skilled trades and technical fields: construction workers, office workers, administrative assistants, information systems technicians, and factory workers encountering computer-integrated manufacturing systems. Next, the education of managers is considered. Finally, updating knowledge of advanced professionals is examined. Examples from various providers show contributions toward available opportunities. Part III deals with those whom training programs fail to reach or serve adequately: dislocated workers, unemployed youth, immigrants and refugees, and welfare recipients. The report concludes that the issues call for public responsibility and action. Federal, state, and private initiatives are urged. Endnotes for each chapter and an index are appended. (YLB)

The Matter of Piety Ruben Suykerbuyk 2020 "The Matter of Piety provides the first in-depth study of Zoutleuw's exceptionally well-preserved pilgrimage church in a comparative perspective, and reevaluates religious art and material culture in Netherlandish piety from the late Middle Ages through the crisis of iconoclasm and the Reformation to Catholic restoration. Analyzing the changing functions, outlooks, and meanings of devotional objects - monumental sacrament houses, cult statues and altarpieces, and small votive offerings or relics - Ruben Suykerbuyk revises dominant narratives about Catholic culture and patronage in the Low Countries. Rather than being a paralyzing force, the Reformation incited engaged counterinitiatives, and the vitality of late medieval devotion served as the fertile ground from which the Counter-Reformation organically grew under Protestant impulses"--

Principles and Recommendations for Population and Housing Censuses United Nations. Statistical Division 2008 The population and housing census is part of an integrated national statistical system, which may include other censuses (for example, agriculture), surveys, registers and administrative files. It provides, at regular intervals, the benchmark for population count at national and local levels. For small geographical areas or sub-populations, it may represent the only source of information for certain social, demographic and economic characteristics. For many

countries the census also provides a solid framework to develop sampling frames. This publication represents one of the pillars for data collection on the number and characteristics of the population of a country. **Making Choices about Hydrogen** Lynn Krieger Mytelka 2008 Since the mid-1990s, the emergence of a hydrogen economy and the speed with which it will arrive have been vigorously debated. As a disruptive technology, dominant designs for the production, storage and distribution of hydrogen have not yet been established. Neither have performance characteristics been achieved to compete with the existing combustion engine, though the efficiency and durability of hydrogen fuel cells are improving. This publication highlights the uncertainties involved in making choices about hydrogen and fuel cells in planning the development policies on national energy, environment and transport sector.-- Publisher's description.

Ours to Hack and to Own Trebor Scholz 2017-01-12 Real democracy and the Internet are not mutually exclusive. Here, for the first time in one volume, are some of the most cogent thinkers and doers on the subject of the cooptation of the Internet, and how we can resist and reverse the process. The activists who have put together Ours to Hack and to Own argue for a new kind of online economy: platform cooperativism, which combines the rich heritage of cooperatives with the promise of 21st-century technologies, free from monopoly, exploitation, and surveillance. The on-demand economy is reversing the rights and protections workers fought for centuries to win. Ordinary Internet users, meanwhile, retain little control over their personal data. While promising to be the great equalizers, online platforms have often exacerbated social inequalities. Can the Internet be owned and governed differently? What if Uber drivers set up their own platform, or if a city's residents controlled their own version of Airbnb? This book shows that another kind of Internet is possible--and that, in a new generation of online platforms, it is already taking shape. Included in this volume are contributions from Michel Bauwens, Yochai Benkler, Francesca Brià, Susie Cagle, Miriam Cherry, Ra Criscitiello, John Duda, Marina Gorbis, Karen Gregory, Seda Gürses, Steven Hill, Dmytri Kleiner, Vasilis Kostakis, Brendan Martin, Micky Metts, Kristy Milland, Mayo Fuster Morell, Jessica Gordon Nembhard, Rachel O'Dwyer, Janelle Orsi, Michael Peck, Carmen Rojas, Douglas Rushkoff, Saskia Sassen, Juliet Schor, Palak Shah, Tom Slee, Danny Spitzberg, Arun Sundararajan, Astra Taylor, Cameron Tonkinwise, McKenzie Wark, and Caroline Woolard.

Tahiti Nui Colin W. Newbury 2019-03-31 Tahiti Nui is an account of the survival of a Polynesian society in the face of successive settlements of missionaries, traders, and administrators. Beginning with the first explorers and Captain Cook's scientific observations at Point Venus, Dr. Newbury has separated the various strands interwoven in the fabric of Tahitian society, tracing their development and showing how they interacted at successive stages. Missionaries and foreign traders, administrators and Polynesians, planters and immigrant Chinese have all contributed to the distinctive flavor of French Polynesia, with Tahiti and Tahitians becoming increasingly dominant, not just as the focus of the French administration in Pape'ete, but in the social networks and trading patterns that have evolved.
