The SAGE Encyclopedia of Communication Research

Methods Mike Allen 2017-04-11
Communication research is evolving and changing in a world of online journals, open-access, and new ways of obtaining data and conducting experiments via the Internet. Although there are generic encyclopedias describing basic social science research methodologies in general, until now there has been no comprehensive A-to-Z reference work exploring methods specific to communication and media studies. Our entries, authored by key figures in the field, focus on special considerations when applied specifically to communication research, accompanied by engaging examples from the literature of communication, journalism, and media studies. Entries cover every step of the research process, from the creative development of research topics and questions to literature reviews, selection of best

methods (whether quantitative, qualitative, or mixed) for analyzing research results and publishing research findings, whether in traditional media or via new media outlets. In addition to expected entries covering the basics of theories and methods traditionally used in communication research, other entries discuss important trends influencing the future of that research, including contemporary practical issues students will face in communication professions, the influences of globalization on research, use of new recording technologies in fieldwork, and the challenges and opportunities related to studying online multi-media environments. Email, texting, cellphone video, and blogging are shown not only as topics of research but also as means of collecting and analyzing data. Still other entries delve into considerations of accountability, copyright, confidentiality, data ownership and security, privacy,

and other aspects of conducting an ethical research program. Features: 652 signed entries are contained in an authoritative work spanning four volumes available in choice of electronic or print formats. Although organized A-to-Z, front matter includes a Reader's Guide grouping entries thematically to help students interested in a specific aspect of communication research to more easily locate directly related entries. Back matter includes a Chronology of the development of the field of communication research; a Resource Guide to classic books, journals, and associations; a Glossary introducing the terminology of the field; and a detailed Index. Entries conclude with References/Further Readings and Cross-References to related entries to guide students further in their research journeys. The Index, Reader's Guide themes, and Cross-References combine to provide

robust search-and-browse in the e-version.

Robert L. Hilliard 2001 Media, Education and America's Counter-Culture Revolution is an adaptation and amalgamation of some of the author's speeches, papers, and essays during his service in several federal government communication and education posts during the 1960s and 1970s. Dealing with the use and misuse of media and their impact--or lack of it--on our country's political, cultural, and educational development, this book shows how far we fell short of what we might have done with the media, and suggests what we might still do.

Vocational Education Stephen Billett 2011-07-02 This book discusses what constitutes vocational education as well as its key purposes, objects, formation and practices. In short, it seeks to

outline and elaborate the nature of the project of vocational education. It addresses a significant gap in the available literature by providing a single text that elaborates the scope and diversity of the sector, its key objectives (i.e. vocations and occupations), its formation and development as an education sector, and the scope of its purposes and considerations in the curriculum. The volume achieves these objectives by discussing and defining the concept of vocational education as being that form of education that seeks to advise individuals about, prepare them for, and further develop their capacities to perform the kinds of occupations that societies require and individuals need to participate in—and through which they often come to define themselves. In particular, it discusses the distinctions between occupations as a largely social fact and vocations as being a socially

shaped outcome assented to by individuals. As people identify closely with the kinds of occupations they engage in, the standing of, and the effectiveness of vocational education is central to individuals' well-being, competence and progress. Ultimately, this book argues that the provision of vocational education needs to realise important personal and social goals.

The Cult of Smart Fredrik deBoer 2020-08-04 Named one of Vulture's Top 10 Best Books of 2020! Leftist firebrand Fredrik deBoer exposes the lie at the heart of our educational system and demands top-to-bottom reform. Everyone agrees that education is the key to creating a more just and equal world, and that our schools are broken and failing. Proposed reforms variously target incompetent

teachers, corrupt union practices, or outdated curricula, but no one acknowledges a scientifically-proven fact that we all understand intuitively: Academic potential varies between individuals, and cannot be dramatically improved. In *The Cult of Smart*, educator and outspoken leftist Fredrik deBoer exposes this omission as the central flaw of our entire society, which has created and perpetuated an unjust class structure based on intellectual ability. Since cognitive talent varies from person to person, our education system can never create equal opportunity for all. Instead, it teaches our children that hierarchy and competition are natural, and that human value should be based on intelligence. These ideas are counter to everything that the left believes, but until they

acknowledge the existence of individual cognitive differences, progressives remain complicit in keeping the status quo in place. This passionate, voice-driven manifesto demands that we embrace a new goal for education: equality of outcomes. We must create a world that has a place for everyone, not just the ~~Academic elite~~ ~~talented~~ ~~But~~ ~~we'll~~ never achieve this dream until the Cult of Smart is destroyed.
