Children are the
foundation of the United
States, and supporting
them is a key component
of building a successful
future. However,
millions of children
face health inequities
that compromise their
development, well-being,
and long-term outcomes,
despite substantial
scientific evidence
about how those
adversities contribute
to poor health.
Advancements in
neurobiological and
socio-behavioral science
show that critical
biological systems
develop in the prenatal
through early childhood
periods, and
neurobiological
development is extremely
responsive to
environmental influences
during these stages.
Consequently, social,

economic, cultural, and
environmental factors
significantly affect a
child's health ecosystem
and ability to thrive
throughout adulthood.
