Our House Barbara König 1998 As the novel opens, a young woman is returning home in the company of a new love, who departs after they make a date for that evening. As Nadine prepares for her rendezvous, she converses with a series of characters: the contentious Cyril, the critical Dombrowskaya, the morbid and degenerate Anatol, the gentle Bozena. All claim insight into Nadine's past; all seem to have a stake in the young woman's future. Far from being a group of stable, supportive friends, the characters are revealed to be the elements of Nadine's fragmented personality. The experiences and desires of the various personalities are revealed, slowly exposing the core of Nadine's deep uncertainty and self-doubt. As the time of her assignation approaches, Nadine's attempts to quiet the cacophony of voices become more urgent, and the young woman searches desperately for a means of integrating herself and the other voices.

Mac OS X Panther Hacks Rael Dornfest 2004 Like the animal it's named for, Mac OS X Panther is beautiful, sleek, superbly efficient, dangerously alluring, and all muscle under the surface. Beneath its appealing interface, it's a hard-working machine. Those coming to Mac OS X from previous incarnations of the operating system recognize much of the friendly face of the Macintosh they're used to, but they're also plunged into a whole new world. Unix converts to Mac OS X find a familiar FreeBSD-like operating system at the core and many of the command-line applications that they're familiar with: it's like an open invitation to roll up their sleeves and hack. Mac OS X Panther Hacks brings together the perfect combination of tips, tricks, and tools to help serious Mac users--regardless of their background--get the most from their machines. This revised collection reflects the real-world know how of those well-steeped in Unix history and expertise, sharing their no-nonsense, sometimes quick-and-dirty solutions to administering and taking full advantage of everything a Unix desktop has to offer: Web, Mail, and FTP serving, security services, SSH, Perl and shell scripting, compiling, configuring, scheduling, networking, and hacking. Add to that the experience of die-hard Macintosh users, customizing and modifying their hardware and software to meet their needs. The end result is cool stuff no power user should be without. The hacks in the book range from the quick and easy to the more complex. Each can be read easily in a few minutes, saving countless hours of searching for the right answer. Mac OS X Panther Hacks provides direct, hands-on solutions in topics such as: User Interface Accessories (iPod, USB devices, mobile phones, PDAs, etc.) Wired and wireless networking (Ethernet, WiFi, Bluetooth, etc.) Email (servers and clients) Web (servers and clients) Messaging (iChat and associated apps) Printing and Faxing (sharing printers, fax server, etc.) Multimedia If you want more than your average Mac user--you want to explore and experiment, unearth shortcuts, create useful tools, and come up with fun things to try on your own--this book will set you on the right track. Written for users who need to go beyond what's covered in conventional manuals--Mac OS X Panther Hacks will bring your Mac to its full potential.

Event Data Recorder (EDR) Interpretation Christopher Armstrong 2018-11-02 Collision Reconstruction Methodologies - Volume 7B -The last ten years have seen explosive growth in the technology available to the collision analyst, changing the way reconstruction is practiced in fundamental ways. The greatest technological advances for the crash reconstruction community have come in the realms of photogrammetry and digital media analysis. The widespread use of scanning technology has facilitated the implementation of powerful new tools to digitize forensic data, create 3D models and visualize and analyze crash vehicles and environments. The introduction of unmanned aerial systems and standardization of crash data recorders to the crash reconstruction community have enhanced the ability of a crash analyst to visualize and model the components of a crash reconstruction. Because of the technological changes occurring in the industry, many SAE papers have been written to address the validation and use of new tools for collision reconstruction. Collision Reconstruction Methodologies Volumes 1-12 bring together seminal SAE technical papers surrounding advancements in the crash reconstruction field. Topics featured in the series include: • Night Vision Study and Photogrammetry • Vehicle Event Data Recorders • Motorcycle, Heavy Vehicle, Bicycle and Pedestrian Accident Reconstruction The goal is to provide the latest technologies and methodologies being introduced into collision reconstruction - appealing to crash analysts, consultants and safety engineers alike.

The Rendezvous and Other Stories Daphne Du Maurier 1980 A collection of short stories from one of Britain's most celebrated novelists of our time. The short stories which Daphne du Maurier has written throughout her career have always had a haunting quality, and from two of them - The Birds and Don't Look Now - memorable films have been made. The fourteen tales included in the present volume were written over a period of many years some of them before her first novels were published, others in her thirties and forties; they reflect many human emotions: romance, disenchantment, fantasy, nostalgia, ambition, irony, the longing for adventure. Each story is based on something du Maurier observed or overheard and will provide pleasure for every mood.

In the Cold of the Malecon and Other Stories Antonio José Ponte 2000-10 Departing from both the utopian-political and the romantic-baroque styles of past Cuban literature, Ponte deftly sketches a picture of a contemporary Cuba that is very different from the stereotype of Caribbean life, full of music and dance and colorful celebration. An old man and a six-year-old prodigy have a rendezvous to play chess at a forlorn railroad station. Randomly riding trains, a woman keeps company with a strange assembly of men. An unemployed historian falls in love with an enigmatic astrologer, and the two live out their tragedy in the streets of Havana as homeless vagrants. A father and son take an aimless stroll after lunch to see the whores along the Malecon, Havana's seaside promenade. A young man, one of the last Cuban students to go to the Soviet Union on a foreign-study program, returns to Havana, where he explores his identity-looking at childhood photos with his grandfather, spending time with old friends, and obsessively seeking news of a woman he had known and loved in Russia. In a style both lucid and translucent, Ponte shapes intricate stories of self-discovery and metaphysical revelation in spare and allusive prose. About the Authors Antonio Jose Ponte was born in 1964 in Matanzas, Cuba, and studied at the University of Havana. He worked for some years as an engineer, and then as a screenwriter. In addition to writing short stories and fiction, Ponte has published prize-winning collections of poetry and essays. His work has been published in France, Germany, and Spain. This is his first book to be published in the United States. Cola Franzen is the translator of over twenty books, including Poems of Arab Andalusia, Dreams of the Abandoned Seducer by Alicia Borinsky, and Horses in the Air by Jorge Guillen (recipient of the Academy of American Poets Harold Morton Landon Translation Award 2000). Review "In his first book to be published in the U.S., Ponte gives readers a short collection of six elliptical stories from inside the Cuban revolutionary experience, closer in spirit to the fiction of ~~Patricia A. Applications of Control to the Problem of Adaptive Control~~ controlled writers who see the island as either a mythical homeland or a political cause.

result of a seven year research project using computational intelligence techniques for solving mineral processing problems at the U.S. Bureau of Mines, this book is about intelligent, adaptive process control. It brings together ideas from the field of computational intelligence , a part of the larger field of artificial intelligence, including fuzzy mathematics, genetic algorithms, and neural networks and uses these ideas to develop a generic architecture for accomplishing adaptive process control. In the development of this architecture, the requisite tools are described and then demonstrated on a number of problems. Moreover, most of the examples are of interest in industrial settings (although some simple examples are provided in the beginning so that the reader can focus on technique and not be overburdened with the complexity of the problems being solved.) The focus of Practical Applications of Computational Intelligence for Adaptive Control is on practical applications. It provides practicing engineers and scientists with the information they need to solve process control problems in industry and academia. If the reader ~~Edmunds.com New Cars and Trucks Buyer's Guide 2004~~ interested in the mechanics of basic computational intelligence techniques, then this book is an excellent place to start.
