Those Good Gertrudes

Geraldine J. Clifford
2014-11-02 Those Good Gertrudes explores the professional, civic, and

personal roles of women teachers throughout American history. Its voice, themes, and findings build from the mostly unpublished writings of many women and their families, colleagues, and pupils. Geraldine J. Clifford studied personal history manuscripts in archives and consulted printed autobiographies, diaries, correspondence, oral histories, interviews—even film and fiction—to probe the multifaceted imagery that has surrounded teaching. This broad ranging, inclusive, and comparative work surveys a long past where schoolteaching was essentially men's work, with women relegated to restricted niches such as teaching rudiments of the vernacular language to young children and socializing girls for traditional gender roles. Clifford documents and explains the emergence of women as the prototypical schoolteachers in the United States, a process apparent in the late

colonial period and continuing through the nineteenth century, when they became the majority of American public and private schoolteachers. The capstone of Clifford's distinguished career and the definitive book on women teachers in America, *Those Good Gertrudes* will engage scholars in the history of education and women's history, teachers past, present, and future, and readers with vivid memories of their own teachers. "Clifford's book is a timely blessing, the history of teachers are at last accorded their own integrity instead of as appendages in other fields of study."—San Francisco Book Review "Clifford's colleagues around the world have long anticipated *Those Good Gertrudes*. They will find the wait exceedingly worthwhile. The book's scope and depth can now incite new generations of students to reflect on and investigate the repercussions of teaching and

learning—activities still driven essentially by women both in the U.S. and globally."—Donald R. Warren, Indiana University "Those 'Good Gertrudes'—the women who dedicated some part of their lives to teaching—finally have a great historian to tell this important, missing story. Professor Geraldine J. Clifford has brought together an intense combination of extended research, fresh archival information, and the insightful interpretation that only wisdom can bring to scholarship. This stands as a landmark work in the social history of education."—John R. Thelin, author of *A History of American Higher Education* The first woman to receive a Guggenheim Fellowship for research in education, Geraldine J. Clifford is professor emerita at the University of California, Berkeley. She is the author of *Lone Voyagers: Academic Women in Coeducational*

"Containing the public messages, speeches, and statements of the President", 1956-1992. *Leveraging Technology to Improve School Safety and Student Wellbeing* Huffman, Stephanie P. 2019-10-25 From implementation in the classroom to building security, technology has permeated all aspects of education throughout the United States. Though hardware has been

developed to identify and prevent weaponry from entering a school, including video cameras, entry control devices, and weapon detectors, school safety remains a fundamental concern with the recent increase of school violence and emergence of cyberbullying.

Professionals need answers on how to use this technology to protect the physical, emotional, and social wellbeing of all children. Leveraging Technology to Improve School Safety and Student Wellbeing is a pivotal reference source that provides vital research on the application of technology in P-12 school safety and its use to foster an environment where students can feel safe and be academically successful. The book will comprise empirical, conceptual, and practical applications that craft an overall understanding of the issues in creating a "safe" learning

environment and the role technology can and should play; where a student's wellbeing is valued and protected from external and internal entities, equitable access is treasured as a means for facilitating the growth of the whole student, and policy, practices, and procedures are implemented to build a foundation to transform the culture and climate of the school into an inclusive nurturing environment. While highlighting topics such as professional development, digital citizenship, and community infrastructure, this publication is ideally designed for educators, scholars, leadership practitioners, coordinators, policymakers, government officials, law enforcement, security professionals, IT consultants, parents, academicians, researchers, and students.

opportunities have contributed to diminished social mobility and are influenced by disparities in collegiate experiences. An integral part of the mission of colleges and universities is to advance student achievement and prepare students for a global society by fostering educational excellence and ensuring equal access. In order to provide equal educational opportunities, further study on the best practices to create a diverse and welcoming campus community for all faculty and students is required. The Handbook of Research on Opening Pathways for Marginalized Individuals in Higher Education examines specific case studies and stories from the field, analyzes the research breadth for supporting the creation of policies to foster equitable educational access, and studies higher education inclusive policies that

promote leadership, social justice, and the health and well-being of faculty and students. The book also helps to alleviate and remedy issues of "historical privilege" with a lens on diversity and support through the creation of inclusive communities of equitable educational access. Covering a range of topics such as social justice, accessibility, and healthy student interactions, this reference work is ideal for academicians, researchers, scholars, practitioners, instructors, and students.

prevent the next attack. Yet others argue the traumatizing effects of such exercises on the students. Additionally, violence between students continues to remain problematic as bullying pervades children's lives both at school and at home, leading to negative mental health impacts and, in extreme cases, suicide. Establishing safer school policies, promoting violence prevention programs, building healthier classroom environments, and providing better staff training are all vital for protecting students physically and mentally. The Research Anthology on School Shootings, Peer Victimization, and Solutions for Building Safer Educational Institutions examines the current sources of violence within educational systems, and it offers solutions on how to provide a safer space for both students and educators alike. Broken into four sections, the book

examines the causes and impacts that peer victimization has on students and how this can lead to further violence and investigates strategies for detecting the warning signs. The book provides solutions that range from policies and programs that can be established to strategies for teaching nonviolence and promoting coexistence in the classroom. Highlighting a range of topics such as violence prevention, school climate, and bullying, this publication is an ideal reference source for school administrators, law enforcement, teachers, government and state officials, school boards, academicians, researchers, and upper-level students who are intent on stopping the persisting and unfortunate problem that is school violence.

Molybdenum-99 for Medical Imaging National Academies of Sciences, Engineering, and Medicine 2016-10-28 The decay product of the medical isotope molybdenum-99 (Mo-99), technetium-99m (Tc-99m), and associated medical isotopes iodine-131 (I-131) and xenon-133 (Xe-133) are used worldwide for medical

diagnostic imaging or therapy. The United States consumes about half of the world's supply of Mo-99, but there has been no domestic (i.e., U.S.-based) production of this isotope since the late 1980s. The United States imports Mo-99 for domestic use from Australia, Canada, Europe, and South Africa. Mo-99 and Tc-99m cannot be stockpiled for use because of their short half-lives. Consequently, they must be routinely produced and delivered to medical imaging centers. Almost all Mo-99 for medical use is produced by irradiating highly enriched uranium (HEU) targets in research reactors, several of which are over 50 years old and are approaching the end of their operating lives. Unanticipated and extended shutdowns of some of these old reactors have resulted in severe Mo-99 supply shortages in the United States and other countries. Some of these
