Advances in Artificial Life Fernando Almeida e Costa 2007-09-04 This book constitutes the refereed proceedings of the 9th European Conference on Artificial Life, ECAL 2007, held in Lisbon, Portugal. The 125 revised full papers cover morphogenesis and development, robotics and autonomous agents, evolutionary computation and theory, cellular automata, models of biological systems and their applications, ant colony and swarm systems, evolution of communication, simulation of social interactions, self-replication, artificial chemistry.

Recent Trends and Advances in Wireless and IoT-enabled Networks Mian Ahmad Jan 2019-01-22 The book covers a variety of topics in information and communications technology (ICT) and their impact on innovation and business. The authors discuss various innovations, business and industrial motivations, and impact on humans and the interplay between those factors in terms of finance, demand, and competition. Topics discussed include the convergence of machine to machine (M2M), internet of things (IoT), social, and big data. They also discuss AI and its integration into technologies from machine learning, predictive analytics, security software, to intelligent agents, and many more. Contributions come from academics and professionals around the world. Covers the most recent practices in ICT related topics pertaining to technological growth, innovation, and business; Presents a survey on the most recent technological areas revolutionizing how humans communicate and interact; Features four sections: IoT, Wireless Ad Hoc & Sensor Networks, Fog Computing, and Big Data Analytics.

Information Ethics, Globalization and Citizenship Toni Samek 2017-03-22 The boundaries of citizenship have been blurred by global information systems—while the public and private spheres have been reshaped through globalization (and colonialism and capitalism). This collection of new essays explores information and citizenship in the digital age from a range of perspectives, presenting cautionary tales along with possibilities for “decolonizing” digital information and literacy. Topics include Wikileaks and the dissolution of information; ethical issues for teachers, policy makers and librarians; and creating safe spaces through ethical librarianship.

Advances in Robotics and Automatic Control: Reviews, Vol. 1 Sergey Yurish 2018-07-22 The first volume of the *Advances in Robotics and Automatic Control: Reviews*, book series started by IFSA Publishing in 2018 contains ten chapters written by 32 contributors from 9 countries: Belgium, China, Germany, India, Ireland, Japan, Serbia, Tunisia and USA. We hope that readers will enjoy this book and it can be a valuable tool for those who involved in research and development of various robots and automatic control systems.

Canadian Saturday Night 1996

Gothic Science Fiction 1980-2010 Sara Wasson 2011-01-01 Gothic fiction's focus on the irrational and supernatural would seem to conflict with science fiction's rational foundations. However, as this novel collection demonstrates, the two categories often intersect in rich and revealing ways. Analyzing a range of works—including literature, film, graphic novels, and trading card games—from the past three decades through the lens of this hybrid genre, this volume examines their engagement with the era's dramatic changes in communication technology, medical science, and personal and global politics.

The Shipbuilder and Marine Engine-builder 1946

Robots That Kill Judith A. Markowitz 2019-04-17 This book describes real-world killer robots using a blend of perspectives. Overviews of technologies, such as autonomy and artificial intelligence, demonstrate how science enables these robots to be effective killers. Incisive analyses of social controversies swirling around the design and use of killer robots reveal that science, alone, will not govern their future. Among those disputes is whether fully-autonomous, robotic weapons should be banned. Examinations of killers from the golem to Frankenstein's monster reveal that artificially-created beings like them are precursors of real 21st century killer robots. This book laces the death and destruction caused by all these killers with science and humor. The seamless combination of these elements produces a deeper and richer understanding of the robots around us.

Redemption Richard Powell-Gonzalez 2014-09-18 Rarely do we see stories written about God, and even less about His creation. Too frequently, we limit the first verse of the Bible to what happened here on earth. However, the verse could easily read: “In the beginning God created Heaven and (fill in the blank).” We forget that God is infinitely more capable of creating every what-if scenario that men can only imagine and write about. However, God can make any scenario real. In the movie *Contact*, the character played by Jodie Foster says, “The universe is a pretty big place. If it's just us, seems like an awful waste of space.” The author of those words was Carl Sagan. I do not think he would have thought that way if he had seriously considered the themes in C. S. Lewis' *Space Trilogy*. C. S. Lewis wrote his *Space Trilogy* about God quarantining his creations from each other in the existing solar system. What I do in this fictional novel is show how three of his creations work, in different parts of the universe, against a fourth to bring about God's will of saving the remnant from each and giving them the opportunity to experience His redemption. Therefore, the overarching purpose of this novel was to expand Lewis' idea of the universe as a whole, and show how each creation stood in the presence of God and how, through God's sovereignty, His will is done among these different creations.

1995

The Supernatural Cinema of Guillermo del Toro John W. Morehead 2015-05-21 Oscar winner Guillermo del Toro is one of the most prolific artists working in film. His directorial work includes *Cronos* (1993), *Mimic* (1997), *The Devil's Backbone* (2001), *Blade II* (2002), *Hellboy* (2004), *Pan's Labyrinth* (2006), *Hellboy II* (2008) and *Pacific Rim* (2013). He has also worked extensively as a producer, with several screenwriting credits to his name. As a novelist he coauthored *The Strain Trilogy* (2009-2011), which he also developed into a television series for FX in 2014. Del Toro has spoken of the “primal, spiritual function” of his art, which gives expression to his fascination with monsters, myth, archetype, metaphor, Jungian psychology, the paranormal and religion. This collection of new essays discusses cultural, religious and literary influences on del Toro's work and explores key themes of his films, including the child's experience of humanity through encounters with the monstrous.

Proceedings, 12th International Conference on Image Analysis and Processing 2003 The organization of the ICIAP 2003 proceedings reflects the main topics of the conference: shape analysis and reconstruction, 3D models, early vision and image analysis, pattern recognition and image inference, visual processing for communication and various application domains. The major topics discussed in the text are on use of image analysis and processing techniques and tools both in standard application environments and in the new scenario of internet based delivery of information.

Counter Clockwise Jason Cockcroft 2009-10-06 What if your mother were hit by a bus? And what if your father disappeared one day through a hole in the bathroom wall? Is there a way to change the course of your life's history? What if time moved In this dazzling debut novel, Jason Cockcroft has crafted a mind-bending adventure with a startlingly original narrative structure.

International Workshop Expert Systems & Their Applications 1988

Jason and the Quest for the Ram with the Gold-Colored Fleece Michael Royea 2020-06-19 The power of friendship, and a little magic, can overcome the most challenging obstacles. Jason, a ne'er-do-well 12-year-old, is hired to find the prize-winning ram with the gold-colored fleece, which has been stolen a week before the big fair. Accompanied by five of his closest friends, the group sets sail on what will become an epic journey. Or at least a good excuse to skip school. They face many perils along the way, including a giant serpent, strange beings that may or may not be gods of war, and deceitful humans. Once they locate the ram, Jason must perform an impossible task with the help of Melanie, his love interest who is also a witch. The crew encounter more dangers on the voyage home and realize that getting the ram was the easy part. Someone will pay a terrible price and experience betrayal as they return the ram to its rightful owner. The quest evolves from a combined will to succeed to a test of the endurance of friendship.
