A Practical Manual to Labor and Delivery for Medical Students and Residents Shad Deering MD

2009-05-11 This book is meant to bridge the gap between small handbooks that do not contain enough material to understand why you are doing certain things and large textbooks that lack the practical information you need for how to do specific procedures, write notes, orders, and dictations. After reading it, you will be prepared to care for an obstetric patient from the moment they arrive in triage until the time they are discharged. You will understand not only how to perform both simple and complicated procedures, but also why they are necessary, and you will have the answers to the most common pimp questions that are asked of students and residents. The most up-to-date literature and evidence-based recommendations have been used to create simple treatment algorithms for the most common issues you will face, and numerous illustrations are included for clarity as well. Because of its focus, this book is also valuable resource for staff physicians who need an updated text on current obstetric care as well as for those who regularly interact with and teach medical students and residents.

Gravel Roads Ken Skorseth 2000 The purpose of this manual is to provide clear and helpful information for maintaining gravel roads. Very little technical help is available to small agencies that are responsible for managing these roads. Gravel road maintenance has traditionally been "more of an art than a science" and very few formal standards exist. This manual contains guidelines to help answer the questions that arise concerning gravel road maintenance such as: What is enough surface crown? What is too much? What causes corrugation? The information is as nontechnical as possible without sacrificing clear guidelines and instructions on how to do the job right.

Building Industries at Sea - 'Blue Growth' and the New Maritime Economy Kate Johnson 2022-09-01

Throughout the world there is evidence of mounting interest in marine resources and new maritime industries to create jobs, economic growth and to help in the provision of energy and food security. Expanding populations, insecurity of traditional sources of supply and the effects of climate change add urgency to a perceived need to address and overcome the serious challenges of working in the maritime environment. Four promising areas of activity for 'Blue Growth' have been identified at European Union policy level including Aquaculture; Renewable Energy (offshore wind, wave and tide); Seabed Mining; and Blue Biotechnology. Work has started to raise the technological and investment readiness levels (TRLs and IRLs) of these prospective industries drawing on the experience of established maritime industries such as Offshore Oil and Gas; Shipping; Fisheries and Tourism. An accord has to be struck between policy makers and regulators on the one hand, anxious to direct research and business incentives in effective and efficient directions, and developers, investors and businesses on the other, anxious to reduce the risks of such potentially profitable but innovative investments.The EU H2020 MARIBE (Marine Investment for the Blue Economy) funded project was designed to identify the key technical and non-technical challenges facing maritime industries and to place them into the social and economic context of the coastal and ocean economy. MARIBE went on to examine with companies, real projects for the combination of marine industry sectors into multi-use platforms (MUPs). The purpose of this book is to publish the detailed analysis of each prospective and established maritime business sector. Sector experts working to a common template explain what these industries are, how they work, their prospects to create wealth and employment, and where they currently stand in terms of innovation, trends and their lifecycle. The book goes on to describe progress with the changing regulatory and planning regimes in the European Sea Basins including the Caribbean where there are significant European interests. The book includes:• Experienced chapter authors from a truly multidisciplinary team of sector specialisms• First extensive study to compare and contrast traditional Blue Economy with Blue Growth• Complementary to EU and National policies for multi-use of maritime space
