Improving the Quality of Health Care for Mental and Substance-Use Conditions Institute of Medicine 2006-03-29 Each year, more than 33 million Americans receive health care for mental or substance-use conditions, or both. Together, mental and substance-use illnesses are the leading cause of death and disability for women, the highest for men ages 15-44, and the second highest for all men. Effective treatments exist, but services are frequently fragmented and, as with general health care, there are barriers that prevent many from receiving these treatments as designed or at all. The consequences of this are seriousâ€"for these individuals and their families; their employers and the workforce; for the nationâ€™s economy; as well as the education, welfare, and justice systems. *Improving the Quality of Health Care for Mental and Substance-Use Conditions* examines the distinctive characteristics of health care for mental and substance-use conditions, including payment, benefit coverage, and regulatory issues, as well as health care organization and delivery issues. This new volume in the Quality Chasm series puts forth an agenda for improving the quality of this care based on this analysis. Patients and their families, primary health care providers, specialty mental health and substance-use treatment providers, health care organizations, health plans, purchasers of group health care, and all involved in health care for mental and substanceâ€"use conditions will benefit from this guide to achieving better care.

Transition-Age Youth Mental Health Care Vivien Chan
2021-03-10 Over the course of the last two decades, improved
practices in child and adolescent mental healthcare have led to a
decreased environment of stigma, which also led to an increased
identification and treatment of mental health disorders in children
and youth. Considering that treatment and outcomes are
improved with early intervention, this is good news. However, the
success gained in the field of child and adolescent psychiatry
leads to a new challenge: transitioning from adolescent care to
adult care. It has been known for some time that children, adult,
and geriatric patients all have unique needs where it comes to
mental healthcare, yet limited work has been done where it comes
to the shifting of the lifespan. Where it comes to the child-adult
transition—defined as those in their late teens and
early/mid-20s—there can be multiple barriers in seeking mental
healthcare that stem from age-appropriate developmental
approaches as well as include systems of care needs. Apart from
increasing childhood intervention, the problem is exacerbated by
the changing social dynamics: more youths are attending college
rather than diving straight into the workforce, but for various
reasons these youths can be more dependent on their parents
more than previous generations. Technology has improved the
daily lives of many, but it has also created a new layer of
complications in the mental health world. The quality and amount
of access to care between those with a certain level of privilege
and those who do not have this privilege is sharp, creating more
complicating factors for people in this age range. Such societal
change has unfolded so rapidly that training programs have not
had an opportunity to catch up, which has created a crisis for care.
Efforts to modernize the approach to this unique age group are
still young, and so no resource exists for any clinicians at any
phase in their career. This book aims to serve as the first concise
guide to fill this gap in the literature. The book will be edited by
two leading figures in transition age youth, both of whom are at
institutions that have been at the forefront of this clinical work and
research. This proposed mid-sized guide is therefore intended to
be a collaborative effort, written primarily by child and adolescent
psychiatrists, and also with adult psychiatrists. The aim is to

discuss the developmental presentation of many common mental health diagnoses and topics in chapters, with each chapter containing clinically-relevant “bullet points” and/or salient features that receiving providers, who are generally, adult-trained, should keep in mind when continuing mental health treatment from the child and adolescent system. Chapters will cover a wide range of challenges that are unique to transition-age youths, including their unique developmental needs, anxiety, mood, and personality disorders at the interface of this development, trauma and adjustment disorders, special populations, and a wide range of other topics. Each chapter will begin with a clinical pearl about each topic before delving into the specifics.
