What Do We Know and What Should We Do About Internet Privacy? Paul Bernal 2020-02-06 Privacy on the internet is challenged in a wide variety of ways - from large social media companies, whose entire business models are based on privacy invasion, through the developing technologies of facial recognition, to the desire of governments to monitor our every activity online. But the impact these issues have on our daily lives is often underplayed or misunderstood. In this book, Paul Bernal analyses how the internet became what it is today, exploring how the current manifestation of the internet works for people, for companies and even for governments, with reference to the new privacy battlefields of location and health data, the internet of things and the increasingly contentious issue of personal data and political manipulation. The author then proposes what we should do about the problems surrounding internet privacy, such as significant changes in government policy, a reversal of the current 'war' on encryption, being brave enough to take on the internet giants, and challenging the idea that 'real names' would improve the discourse on social networks. ABOUT THE SERIES: The 'What Do We Know and What Should We Do About...?' series offers readers short, up-to-date overviews of key issues often misrepresented, simplified or misunderstood in modern society and the media. Each book is written by a leading social scientist with an established reputation in the relevant subject area. The Series Editor is Professor Chris Grey, Royal Holloway, University of London

LINEAR ALGEBRA S. KUMARESAN 2000-01-01 This clear, concise and highly readable text is designed for a first course in linear algebra and is intended for undergraduate courses in mathematics. It focusses throughout on geometric explanations to make the student perceive that linear algebra is nothing but analytic geometry of n dimensions. From the very start, linear algebra is presented as an extension of the theory of simultaneous linear equations and their geometric interpretation is shown to be a recurring theme of the subject. The integration of abstract algebraic concepts with the underlying geometric notions is one of the most distinguishing features of this book — designed to help students in the pursuit of multivariable calculus and differential geometry in subsequent courses.Explanations and concepts are logically presented in a conversational tone and well-constructed writing style so that students at a variety of levels can understand the material and acquire a solid foundation in the basic skills of linear algebra.

Microwave and RF Design of Wireless Systems David M. Pozar 2000-11-29 David Pozar, author of Microwave Engineering, Second Edition, has written a new text that introduces students to the field of wireless communications. Lady With A Black Umbrella Mary Balogh 2016-02-08 Giles Fairhaven, Viscount Kincade, does not believe his life can get much worse after his purse is stolen at an inn before he has paid his bill and then he is set upon by three ruffians in the inn yard before he can leave. But it does grow worse when a little slip of a lady clad only in a flannel nightgown and wielding a large black man's umbrella comes to his rescue and puts his assailants to rout and then--after he has left--pays his reckoning at the inn plus the money he lost the evening before in a card game with a fellow guest plus what he owed the barmaid with whom he spent the night. The ensuing gossip is almost too much humiliation for Giles to bear. Yet when he finds and confronts Daisy Morrison in London, far from being cowed by his displeasure, she declares with sunny good nature that if he insists upon repaying the slight favour she was able to do for him, then he can recommend a lady sponsor to her so that she may find a husband for her younger sister among the gentlemen of the ton. Inexplicably, Giles finds himself agreeing. His troubles are only just beginning.
