James and the Giant Peach - Literature Kit Gr. 3-4 Marie-Helen Goyetche 2006-12-01 Gain a sense of wonder as you travel across the Atlantic in a giant peach. Help students understand reading comprehension and aid them with higher-order thinking questions. Make predictions about what will happen next, and get into the heads of the characters by explaining what they mean with their dialog. Think about the magic power that changes the peach and imagine how it would affect a person, insect or animal. Write a sentence using alliteration to describe an object or event. Complete a KWL Chart on one of the creatures from the book. Aligned to your State Standards and written to Bloom's Taxonomy, additional crossword, word search, comprehension quiz and answer key are also included. About the Novel: A humorous and entertaining fairy tale about the adventures of a boy named James and his insect friends. An old man gives James green magical crystals that do wonders on a peach as it grows bigger than a house. With his insect friends, James flies from England to New York City with the help of 502 seagulls, and lands on the pinnacle of the Empire State Building. His friend, Old-Green-Grasshopper, becomes part of the New York Symphony Orchestra. Silkworm and Miss

Spider set up a factory and make ropes for tightrope walkers. Ladybug gets married to the Head of the Fire Department. Glow-worm becomes the light inside the Statue of Liberty. Centipede is made Vice-President of a high-class firm of boot manufacturers. Earthworm makes commercials for a face cream company.

Being a Beast Charles Foster 2016-01-28 LONGLISTED FOR THE BAILLIE GIFFORD PRIZE 2016 Charles Foster wanted to know what it was like to be a beast: a badger, an otter, a deer, a fox, a swift. What it was really like. And through knowing what it was like he wanted to get down and grapple with the beast in us all. So he tried it out; he lived life as a badger for six weeks, sleeping in a dirt hole and eating earthworms, he came face to face with shrimps as he lived like an otter and he spent hours curled up in a back garden in East London and rooting in bins like an urban fox. A passionate naturalist, Foster realises that every creature creates a different world in its brain and lives in that world. As humans, we share sensory outputs, lights, smells and sound, but trying to explore what it is actually like to live in another of these worlds, belonging to another species, is a fascinating and unique neuro-scientific challenge. For Foster it is also a literary challenge. Looking at what science can tell us about what happens in a fox's or badger's brain when it picks up a scent, he then uses this to imagine their world for us, to write it through their eyes or rather through the eyes of Charles the beast. An intimate look at the life of animals, neuroscience, psychology, nature writing, memoir and more, it is a journey of extraordinary thrills and surprises, containing wonderful moments of humour and joy, but also providing important lessons for all of us who share life on this precious planet.

Physiology explores the essentials of human structure and function through engaging, generously illustrated activities. Much of the content in the first edition has been revised to include larger diagrams, more photographs, and greater depth of coverage in key areas. Sound biological principles are emphasised throughout, and key interactions between body systems are indicated using annotated introductory figures. Using key examples, students are encouraged to explore each body system within the contexts of disease, medicine and technology, aging, and exercise. The result is a rounded exploration of the functioning human."--Back cover.

Concepts of Biology Samantha Fowler 2018-01-07 Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful.

Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.
