The Bottom Billion Paul Collier 2007-05-25 In the universally acclaimed and award-winning *The Bottom Billion*, Paul Collier reveals that fifty failed states--home to the poorest one billion people on Earth--pose the central challenge of the developing world in the twenty-first century. The book shines much-needed light on this group of small nations, largely unnoticed by the industrialized West, that are dropping further and further behind the majority of the world's people, often falling into an absolute decline in living standards. A struggle rages within each of these nations between reformers and corrupt leaders--and the corrupt are winning. Collier analyzes the causes of failure, pointing to a set of traps that ensnare these countries, including civil war, a dependence on the extraction and export of natural resources, and bad governance. Standard solutions do not work, he writes; aid is often ineffective, and globalization can actually make matters worse, driving development to more stable nations. What the bottom billion need, Collier argues, is a bold new plan supported by the Group of Eight industrialized nations. If failed states are ever to be helped, the G8 will have to adopt preferential trade policies, new laws against corruption, new international charters, and even conduct carefully calibrated military interventions. Collier has spent a lifetime working to end global poverty. In *The Bottom Billion*, he offers real hope for solving one of the great humanitarian crises facing the world today. "Set to become a classic. Crammed with statistical nuggets and common sense, his book should be compulsory reading." --*The Economist* "If Sachs seems too saintly and Easterly too cynical, then Collier is the authentic old Africa hand: he knows the terrain and has a keen ear.... If you've ever found yourself on one side or the other of those arguments--and who hasn't?--then you simply must read this book." --Niall Ferguson, *The New York Times Book Review* "Rich in both analysis and recommendations.... Read this book. You will learn much you do not know. It will also change the way you look at the tragedy of persistent poverty in a world of plenty." --*Financial Times*

Digital Media, Youth, and Credibility Matthew S. Eastin 2008 The difficulties in determining the quality of information on the Internet--in particular, the implications of wide access and questionable credibility for youth and learning. Today we have access to an almost inconceivably vast amount of information, from sources that are increasingly portable, accessible, and interactive. The Internet and the explosion of digital media content have made more information available from more sources to more people than at any other time in human history. This brings an infinite number of opportunities for learning, social connection, and entertainment. But at the same time, the origin of information, its quality, and its veracity are often difficult to assess. This volume addresses the issue of credibility--the objective and subjective components that make information believable--in the contemporary media environment. The contributors look particularly at youth audiences and experiences, considering the implications of wide access and the questionable credibility of information for youth and learning. They discuss such topics as the credibility of health information online, how to teach credibility assessment, and public policy solutions. Much research has been done on credibility and new media, but little of it focuses on users younger than college students. *Digital Media, Youth, and Credibility* fills this gap in the literature. 20,000 Miles South Helen Schreider 2017-07-31 Helen and Frank Schreider were true adventurers. Their dream was to drive the length of

the Americas, from the town of Circle, Alaska (just outside the Arctic Circle), to the world's southernmost town, Ushuaia, in Tierra del Fuego. Dinah, their German shepherd, went with them. They are the first people in history to have made this trip. They came back with a whale of a story. The seagoing and mountain-climbing abilities of their amphibious jeep, La Tortuga, were put to a rugged test during the eighteen thrill-packed months the Schreiders were under way. They didn't just drive from Circle to Ushuaia--much of the way there are no roads. Many of the rivers that slice through the jungle are unbridged; the jungle itself often rears up in an impenetrable wall, and the natives just shake their heads and say, "Turn back." Undaunted, the Schreiders hacked their way with machetes through the steaming jungles of southern Mexico, were forced to put out through the monstrous surf into the far from pacific Pacific, island-hopped across the reef-ribbed Caribbean, rode out a hurricane at sea, and crawled to almost sixteen thousand feet in the Peruvian Andes. They are the first to have reached South America in a wheeled vehicle under its own power. La Tortuga served them well and came away with her share of honors: she's the first "ship" ever to have been weighed in on dry land for passage through the Panama Canal and to have driven up to the port captain's door to pick up her pilot. *20,000 MILES SOUTH* is a book filled with the happy glow of discovery, the ease, charm, and determination of its young authors, and the fascinations and romance of faraway places. The Book of Iowa Films Marty Knepper 2014-08-04 This is the first comprehensive history of films made in or about Iowa. It reflects some twenty years of collecting, lecturing, and talking with some of Iowa's current generation of independent filmmakers. It covers the span from 1918 to 2013 and gives important background information on dozens of high profile films such as the STATE FAIR films of 1933 and 1945, THE BRIDGES OF MADISON COUNTY, FIELD OF DREAMS, and many others. It is designed as a companion for the State Historical Society's blockbuster "Hollywood in the Heartland" exhibition in Des Moines that is scheduled to run at least through 2016. The book has an interpretive essay covering the entire history as well as paragraph length descriptions of each film. A user-friendly feature is the Index of Films, which makes it easy to locate discussions of individual films. Marty Knepper is a featured commentator on video screens in the "Hollywood in the Heartland" exhibition.

Perceptual Organization Michael Kubovy 2017-03-31 Originally published in 1981, perceptual organization had been synonymous with Gestalt psychology, and Gestalt psychology had fallen into disrepute. In the heyday of Behaviorism, the few cognitive psychologists of the time pursued Gestalt phenomena. But in 1981, Cognitive Psychology was married to Information Processing. (Some would say that it was a marriage of convenience.) After the wedding, Cognitive Psychology had come to look like a theoretically wrinkled Behaviorism; very few of the mainstream topics of Cognitive Psychology made explicit contact with Gestalt phenomena. In the background, Cognition's first love - Gestalt - was pining to regain favor. The cognitive psychologists' desire for a phenomenological and intellectual interaction with Gestalt psychology did not manifest itself in their publications, but it did surface often enough at the Psychonomic Society meeting in 1976 for them to remark upon it in one of their conversations. This book, then, is the product of the editors' curiosity about the status of ideas at the time, first proposed by Gestalt psychologists. For two days in November 1977, they held an exhilarating symposium that was attended by some 20 people, not all of whom are represented in this volume. At the end of our symposium it was agreed that they would try, in contributions to this volume, to convey the speculative and metatheoretical ground of their research in addition to the solid data and carefully wrought theories that are the figure of their research.

The Great Rupture Viktor Shvets 2020-06-24 Do we need to be free to be innovative, prosperous, or even happy? The lessons of the last five

centuries were unequivocal--without freedom, there could be no prosperity or happiness. However, does this still hold true in the Information Age? Modern technologies are disrupting our societies, altering every facet of our lives, from the nature of work and what we intrinsically value, to how we are informed, entertained, and educated--it promises to be a far deeper disruption than Industrial Revolutions. Humanity is at a major turning point, and how we respond to the merger of technology and financialization will decide our future. Will it be capitalism or communism, feudalism or despotism? By learning from the past and projecting into the future, global market strategist Viktor Shvets explores the weakening nexus between freedom and prosperity and what that means for the future of humanity. From the birth of our modern world, pivotal events in human history have led to the collapse of non-Western civilizations--Mongol warriors sweeping across Eurasian steppes; the Black Death and a re-awakening of human spirit; Zheng He's voyages and the collapse of Novgorod republic; and finally, the ban on printing in Arabic. What can we learn from these events to better prepare ourselves for the future? As we hurtle toward that uncertain future, we must decide whether our cherished individual freedoms are still necessary for success and prosperity, or if in adapting to new technologies, non-Western civilizations are now better positioned for this new world, creating illiberal orders that might no longer suffer from stagnation of ideas. For the first time in at least five centuries, we have an opportunity and tools to build a different society and economy. Will we embrace the challenge?

The Persistence of Technology Stefan Krebs 2021-09-30 Repair, reuse and disposal are closely interlinked phenomena related to the service lives and persistence of technologies. When technical artefacts become old and worn out, decisions have to be taken: is it necessary, worthwhile or even possible to maintain and repair, reuse or dismantle them - or must they be discarded? These decisions depend on factors such as the availability of second-hand markets, repair infrastructures and dismantling or disposal facilities. In telling the stories of China's power grid, Canadian telephones, German automobiles and India's shipbreaking business, among others, the contributions in this volume highlight the persistence of technologies and show that maintenance and repair are not obsolete in modern industries and consumer societies.

Written by experts in the field, it explores topics including systems integration, design, modeling, privacy, ethics and future application domains. Highlighting novel innovation directions, it is intended for academics, engineers and students working in the field of mechatronics, particularly those developing new concepts, methods and ideas.

The Long Tail Chris Anderson 2006-07-11 What happens when the bottlenecks that stand between supply and demand in our culture go away and everything becomes available to everyone? "The Long Tail" is a powerful new force in our economy: the rise of the niche. As the cost of reaching consumers drops dramatically, our markets are shifting from a one-size-fits-all model of mass appeal to one of unlimited variety for unique tastes. From supermarket shelves to advertising agencies, the ability to offer vast choice is changing everything, and causing us to rethink where our markets lie and how to get to them. Unlimited selection is revealing truths about what consumers want and how they want to get it, from DVDs at Netflix to songs on iTunes to advertising on Google. However, this is not just a virtue of online marketplaces; it is an example of an entirely new economic model for business, one that is just beginning to show its power. After a century of obsessing over the few products at the head of the demand curve, the new economics of distribution allow us to turn our focus to the many more products in the tail, which collectively can create a new market as big as the one we already know. The Long Tail is really about the economics of abundance. New efficiencies in distribution, manufacturing, and marketing are essentially resetting the definition of what's commercially viable across the board. If the 20th century was about hits, the 21st will be equally about niches.
