The Problems of Jurisprudence Richard A. Posner 1993-03-15 In this book, one of our country's most distinguished scholar-judges shares with us his vision of the law. For the past two thousand years, the philosophy of law has been dominated by two rival doctrines. One contends that law is more than politics and yields, in the hands of skillful judges, correct answers to even the most difficult legal questions; the other contends that law is politics through and through and that judges wield essentially arbitrary powers. Rejecting these doctrines as too metaphysical in the first instance and too nihilistic in the second, Richard Posner argues for a pragmatic jurisprudence, one that

eschews formalism in favor of the factual and the empirical. Laws, he argues, are not abstract, sacred entities, but socially determined goals for shaping behavior to conform with society's values. Examining how judges go about making difficult decisions, Posner argues that they cannot rely on either logic or science, but must fall back on a grab bag of informal methods of reasoning that owe less than one might think to legal training and experience. Indeed, he reminds us, the greatest figures in American law have transcended the traditional conceptions of the lawyer's craft. Robert Jackson did not attend law school and Benjamin Cardozo left before getting a degree. Holmes was neither the most successful of lawyers nor the most lawyerly of judges. Citing these examples, Posner makes a plea for a law that frees itself from excessive insularity and takes all knowledge, practical and theoretical, as grist for its mill. The pragmatism that Posner espouses implies looking at problems concretely, experimentally, without illusions, with an emphasis on keeping diverse paths of inquiry open, and, above all, with the insistence that social thought and action be evaluated as instruments to desired human goals rather than as ends in themselves. In making his arguments, he discusses notable figures in jurisprudence from Antigone to Ronald Dworkin as well as recent movements ranging from law and economics to civic republicanism, and feminism to libertarianism. All are subjected to Posner's stringent analysis in a fresh and candid examination of some of the deepest problems presented by the enterprise of law.

Measuring Second Language Vocabulary

Acquisition James Milton 2009-10-06 Measuring Second Language Vocabulary Acquisition provides an examination of the background to testing vocabulary knowledge in a second language and in particular considers the effect that word frequency and lexical coverage have on learning and communication in a foreign language. It examines the tools we have for assessing the various facets of

vocabulary knowledge such as aural and written word recognition, the link with word meaning, and vocabulary depth. These are illustrated and the scores they produce are demonstrated to provide normative data. Vocabulary acquisition from course books and in the classroom is examined, as is vocabulary uptake from informal tasks. This book ties scores on tests of vocabulary breadth to performance on standard foreign language examinations and on hierarchies of communicative performance such as the CEFR.

Space, Movement and the Economy in Roman Cities in Italy and Beyond

Frank Vermeulen 2021-05-27 How were space and movement in Roman cities affected by economic life? What can the study of Roman urban landscapes tell us about the nature of the Roman economy? These are the central questions addressed in this volume. While there exist many studies of Roman urban space and of the Roman economy, rarely have the two topics been investigated together in a sustained fashion. In this volume, an international team of archaeologists and historians focuses explicitly on the economics of space and mobility in Roman Imperial cities, in both Italy and the provinces, east and west. Employing many kinds of material and written evidence and a wide range of methodologies, the contributors cast new light both on well-known and on less-explored sites. With their direct focus on the everyday economic uses of urban spaces and the movements through them, the contributors offer a fresh and innovative perspective on the workings of Roman urban economies and on the debates concerning space in the Roman world. This volume will be of

interest to archaeologists and historians, both those studying the Greco-Roman world and those focusing on urban economic space in other periods and places as well as to other scholars studying premodern urbanism and urban economies.

ANTHEM Ayn Rand 2021-01-01 Hailed by The New York Times as "a compelling dystopian look at paranoia from one of the most unique and perceptive writers of our time," this brief, captivating novel offers a cautionary tale. The story unfolds within a society in which all traces of individualism have been eliminated from every aspect of life — use of the word "I" is a capital offense. The hero, a rebel who discovers that man's greatest moral duty is the pursuit of his own happiness, embodies the values the author embraced in her personal philosophy of objectivism: reason, ethics, volition, and individualism. Anthem anticipates the themes Ayn Rand explored in her later masterpieces, *The Fountainhead* and *Atlas Shrugged*. Publisher's Weekly acclaimed it as "a diamond in the rough, often dwarfed by the superstar company it keeps with the author's more popular work, but every bit as gripping, daring, and powerful." Anthem is a dystopian fiction novella by Ayn Rand, written in 1937 and first published in 1938 in England. It takes place at some unspecified future date when mankind has entered another dark age characterized by irrationality, collectivism, and socialistic thinking and economics.

Technological advancement is now carefully planned (when it is allowed to occur at all) and the concept of individuality has been eliminated.

Vocabulary Development Timothy Rasinski

2019-04-18 Knowledge of word meanings is critical to success in reading. A reader cannot fully understand a text in which the meaning to a significant number of words is unknown. Vocabulary knowledge has long been correlated with proficiency in reading. Yet, national surveys of student vocabulary knowledge have demonstrated that student growth in vocabulary has been stagnant at best. This volume offers new insights into vocabulary knowledge and vocabulary teaching. Articles range from a presentation of theories of vocabulary that guide instruction to innovative methods and approaches for teaching vocabulary. Special emphasis is placed on teaching academic and disciplinary vocabulary that is critical to success in content area learning. Our hope for this volume is that it may spark a renewed interest in research into vocabulary and vocabulary instruction and move toward making vocabulary instruction an even more integral part of all literacy and disciplinary instruction.

Game Balance Ian Schreiber 2021-08-16 Within the field of game design, game balance can best be described as a black art. It is the process by which game designers make a game simultaneously fair for players while providing them just the right amount of difficulty to be both exciting and challenging without making the game entirely predictable. This involves a combination of mathematics, psychology, and occasionally other fields such as economics and game theory. *Game Balance* offers readers a dynamic look into game design and player theory. Throughout the book, relevant topics on the use of spreadsheet programs will be included in each chapter. This book therefore doubles as a useful reference on Microsoft Excel, Google Spreadsheets, and other spreadsheet programs and their uses for game designers. **FEATURES** The first and only book to explore game balance as a topic in depth Topics range from intermediate to advanced, while written in an accessible style that demystifies even the most challenging mathematical concepts to the point

where a novice student of game design can understand and apply them Contains powerful spreadsheet techniques which have been tested with all major spreadsheet programs and battle-tested with real-world game design tasks Provides short-form exercises at the end of each chapter to allow for practice of the techniques discussed therein along with three long-term projects divided into parts throughout the book that involve their creation Written by award-winning designers with decades of experience in the field Ian Schreiber has been in the industry since 2000, first as a programmer and then as a game designer. He has worked on eight published game titles, training/simulation games for three Fortune 500 companies, and has advised countless student projects. He is the co-founder of Global Game Jam, the largest in-person game jam event in the world. Ian has taught game design and development courses at a variety of colleges and universities since 2006. Brenda Romero is a BAFTA award-winning game director, entrepreneur, artist, and Fulbright award recipient and is presently game director and creator of the *Empire of Sin* franchise. As a game director, she has worked on 50 games and contributed to many seminal titles, including the *Wizardry* and *Jagged Alliance* series and titles in the *Ghost Recon*, *Dungeons & Dragons*, and *Def Jam* franchises.

The Age of Surveillance Capitalism Shoshana Zuboff 2019-01-31 THE TOP 10 SUNDAY TIMES BESTSELLER Shortlisted for the FT Business Book of the Year Award 2019 'Easily the most important book to be published this century. I find it hard to take any young activist seriously who hasn't at least familiarised themselves with Zuboff's central ideas.' - Zadie Smith, *The Guardian* The challenges to humanity posed by the digital future, the first detailed examination of the unprecedented form of power called "surveillance capitalism," and the quest by powerful corporations to predict and control us. The heady optimism of the Internet's early days is gone. Technologies that were meant to liberate us

have deepened inequality and stoked divisions. Tech companies gather our information online and sell it to the highest bidder, whether government or retailer. Profits now depend not only on predicting our behaviour but modifying it too. How will this fusion of capitalism and the digital shape our values and define our future? Shoshana Zuboff shows that we are at a crossroads. We still have the power to decide what kind of world we want to live in, and what we decide now will shape the rest of the century. Our choices: allow technology to enrich the few and impoverish the many, or harness it and distribute its benefits. *The Age of Surveillance Capitalism* is a deeply-reasoned examination of the threat of unprecedented power free from democratic oversight. As it explores this new capitalism's impact on society, politics, business, and technology, it exposes the struggles that will decide both the next chapter of capitalism and the meaning of information civilization. Most critically, it shows how we can protect ourselves and our communities and ensure we are the masters of the digital rather than its slaves.

Insights into Non-native Vocabulary Teaching and Learning Rubén Chacón-Beltrán 2010-07-12 In a field like L2 vocabulary teaching and learning where interest and research studies are burgeoning, this book offers a useful collection of papers that contains new ways of investigating vocabulary development, techniques for vocabulary teaching such as the Focus on Form hypothesis, word associations, and the use of concordance data. In addition, it tackles recent areas of analysis such as the treatment of vocabulary in teaching materials—an area of almost complete neglect in the literature. The book is divided into three parts. Part one provides the overview and deals with the development of a model for vocabulary teaching and learning. Part two focuses on empirical studies on lexical processing in English and Spanish. Part three centers on materials design for vocabulary teaching and learning. The advances made in this book will certainly be of interest to researchers,

teachers, and graduate students working on this very active field of inquiry.

Transforming the Workforce for Children Birth Through Age 8 National Research Council 2015-07-23 Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. *Transforming the Workforce for Children Birth Through Age 8* explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and

infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

Al Capone Does My Shirts Gennifer Choldenko 2013-07-19 When Moose Flanagan and his family move home, yet again, and become residents of the famous prison island Alcatraz, things get interesting. First of all, they share the island with a few other families and a lot of pretty heavy-duty criminals including Al Capone. And secondly, Moose's sister is starting a new school, which everyone hopes will help her become more integrated with those around her. When Moose comes up with some

pretty cunning money-making schemes based on his famous co-residents, he does not count on his sister becoming inadvertently involved. A charming, funny and utterly enchanting book that skillfully and delicately weaves a humorous tale with some important issues.

How People Learn National Research Council 2000-08-11 First released in the Spring of 1999, How People Learn has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do—with curricula, classroom settings, and teaching methods—to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. How People Learn examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain.

How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.

Communities in Action National Academies of Sciences, Engineering, and Medicine 2017-04-27 In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.
