It is targeted to healthcare students in need of a better understanding of human physiology to combine with their clinical training. The main objective of this book is to elucidate the organization and functioning of the

major organs and systems with an emphasis on the applications of this knowledge on the daily clinical routine. One of the main differences of this textbook that sets it apart from others is that it not only provides the information: it also contextualizes it. Every chapter starts introducing a case study that is related to the content that is going to be approached. At the end of the chapter, there is the conclusion of each case study, which presents the final diagnosis showing every step of the process. This context is essential so that, when the student faces this situation in the real-life clinic he or she will be able to deal with it efficiently. Clinical Applications of Human Anatomy & Physiology also has sections of questions to practice the knowledge that was obtained during the chapter, and the answers to each question are explained so no doubts remain after studying.
