Using 21st Century Science to Improve Risk-Related Evaluations National Academies of Sciences, Engineering, and Medicine 2017-03-16 Over the last decade, several large-scale United States and international programs have been initiated to incorporate advances in molecular and cellular biology, -omics technologies, analytical methods, bioinformatics, and computational tools and methods into the field of toxicology. Similar efforts are being pursued in the field of exposure science with the goals of obtaining more accurate and complete exposure data on individuals and populations for thousands of chemicals over the lifespan; predicting exposures from use data and chemical-property information; and translating exposures between test systems and humans. Using 21st Century Science to Improve Risk-Related Evaluations makes recommendations for integrating new scientific approaches into risk-based evaluations. This study considers the scientific advances that have occurred following the publication of the NRC reports Toxicity Testing in the 21st Century: A Vision and a Strategy and Exposure Science in the 21st Century: A Vision and a Strategy. Given the various ongoing lines of investigation and new data streams that have emerged, this publication proposes how best to integrate and use the emerging results in evaluating chemical risk. Using 21st Century Science to Improve Risk-Related Evaluations considers whether a new paradigm is needed for data validation, how to integrate the divergent data streams, how uncertainty might need to be characterized, and how best to communicate the new approaches so that they are understandable to various stakeholders. **A Practical Guide for Policy Analysis** Eugene Bardach 2019-07-11 "This book provides a wise and engaging how-to guide that meets the central challenge of policy analysis: combining scientific evidence and social goals to craft practical, real-world solutions." —Thomas S. Chapter 6, Arenaviruses: The biochemical and physical properties have now been clarified, and they show a remarkable uniformity in the various viruses constituting the group. The possibility that prenatal infection with LCM may result in hydrocephalus and chorioretinitis has been raised. Serologic surveys have suggested the existence of Lassa virus infection in Guinea, Central African Empire, Mali, Senegal, Cameroon, and Benin, in addition to earlier identification in Nigeria, Liberia, and Sierra Leone. Chapter 7, Coronaviruses: New studies have confirmed the important role of these viruses in common respiratory illnesses of children and adults. Chapter 8, Cytomegalovirus: Sections on pathogenesis of CMV in relation to organ transplantation and mononucleosis, as well as sections on the risk and features of congenital infection and disease, have been expanded. There are encouraging preliminary results with a live CMV vaccine, but the questions of viral persistence and oncogenicity require further evaluation.

Non-Communicable Disease Prevention: Best Buys, Wasted Buys and Contestable Buys Wanrudee Isaranuwachai 2019-12-12 Non-communicable diseases (NCDs) are the leading cause of death worldwide, contributing to over 73% of all deaths annually. Each day NCDs cause more than 100,000 deaths, 80% of which occur in low- and middle-income countries. NCDs, however, are largely preventable, and a great deal of technical knowledge exists about how to prevent and manage them. Why, then, have we, as a global community, not been more successful at reducing this NCD burden? Does a universal problem not have a universal solution? Created by an international consortium of experts, this informative and accessible book provides practical guidelines, key learning points, and dynamic, real-world case studies to aid NCD program managers, policy officers and decision-makers in low- and middle-income countries, so that they can assess interventions for the prevention and control of NCDs. The book was commissioned by the Prince Mahidol Award Conference (PMAC), an annual international conference centred on policy of global significance related to public health. Non-Communicable Disease Prevention: Best Buys, Wasted Buys and Contestable Buys emphasises the importance of context in NCD control and prevention, arguing that the success of an intervention lies in an ability to respond to local needs and environments. The book comprises ten chapters, which collectively explore the reasons behind, and strategies for, preventing and managing the NCD burden. It spans key themes such as political economy, the transferability of economic evidence, the role of cross-sectoral policies, the importance of deliberative processes, and health technology assessment. This book is written for the benefit of the global health community, and is primarily targeted at those individuals who are involved in NCD programs. This book will also be of interest to NCD champions, policy advocates, and educators spearheading the movement for increased visibility of NCDs.

Rheumatic Fever Angelo Taranta 2012-12-06 It has become commonplace to say that the decline of rheumatic fever in Europe and North America has little, if any thing, to do with medicine; but to conclude that efforts to control the disease are futile would be an error leading to what could be termed public health malpractice. The need for adequate treatment of patients suffering from acute rheumatic fever or chronic rheumatic valvular heart disease is obvious; but control also means prevention, and here, too, the need is obvious, if only to lighten the burden on health care, due especially to the treatment of patients with advanced forms of the disease. The feasibility of and justification for rheumatic fever control programmes in developing countries has been often questioned. A co-operative study co-ordinated by the World Health Organization has now demonstrated that systematic prevention of rheumatic fever recurrences not only benefits the patients concerned but also has economic advantages. Primary prevention by systematic penicillin treatment of all streptococcal throat infections is at present beyond the reach of many health care systems, and anti-streptococcal vaccination is still in the research phase. The mainstay of the combat against rheumatic heart disease thus remains 7 RHEUMATIC FEVER secondary prevention - the long-term monthly administration of penicillin injections to identified patients. This requires, among other things, that penicillin be available.
