Teaching and the Case Method Carl Roland Christensen 1987 Teaching and the Case Method delves into the special role of teacher and students in the case method learning process. Schools that want to use the case method more effectively can use this book to teach groups of faculty how to apply case method techniques. For the first time, too, a book about case method teaching attempts to show how the method can be applied in a liberal arts setting. A liberal arts module in the book presents an innovative program for instructors who want to experiment with discussion teaching in traditional arts and science areas. The book focuses on a wide range of knotty problems faced by most instructors, experienced or new, creating an opportunity for them to learn from each other. It's main purpose is to provide a rich opportunity for both professional school and liberal arts instructors to develop their own discussion leadership skills, and to further the process of learning for both themselves and their students. Understanding Medieval Liturgy Helen Gittos 2017-05-15 This book provides an introduction to current work and new directions in the study of medieval liturgy. It focuses primarily on so-called occasional rituals such as burial, church consecration, exorcism and excommunication rather than on the Mass and Office. Recent research on such rites challenges many established ideas, especially about the extent to which they differed from place to place and over time, and how the surviving evidence should be interpreted. These essays are designed to offer guidance about current thinking, especially for those who are new to the subject, want to know more about it, or wish to conduct research on liturgical topics. Bringing together scholars working in different disciplines (history, literature, architectural history, musicology and theology), time periods (from the ninth to the fifteenth centuries) and intellectual traditions, this collection demonstrates the great potential that liturgical evidence offers for understanding many aspects of the Middle Ages. It includes essays that discuss the practicalities of researching liturgical rituals; show through case studies the problems caused by over-reliance on modern editions; explore the range of sources for particular ceremonies and the sort of questions which can be asked of them; and go beyond the rites themselves to investigate how liturgy was practised and understood in the medieval period.

Winning in Emerging Markets Tarun Khanna 2010-04-28 The best way to select emerging markets to exploit is to evaluate their size or growth potential, right? Not according to Krishna Palepu and Tarun Khanna. In *Winning in Emerging Markets*, these leading scholars on the subject present a decidedly different framework for making this crucial choice. The authors argue that the primary exploitable characteristic of emerging markets is the lack of institutions (credit-card systems, intellectual-property adjudication, data research firms) that facilitate efficient business operations. While such "institutional voids" present challenges, they also provide major opportunities-for multinationals and local contenders. Palepu and Khanna provide a playbook for assessing emerging markets' potential and for crafting strategies for succeeding in those markets. They explain how to: · Spot institutional voids in developing economies, including in product, labor, and capital markets, as well as social and political systems · Identify opportunities to fill those voids; for example, by building or improving market institutions yourself · Exploit those opportunities through a rigorous five-phase process, including studying the market over time and acquiring new capabilities Packed with vivid examples and practical toolkits, *Winning in Emerging Markets* is a crucial resource for any company seeking to define and execute business strategy in developing economies.

The Commanding Heights Daniel Yergin 2002-06-15 The Commanding Heights is about the most powerful political and economic force in the world today -- the epic struggle between government and the marketplace that has, over the last twenty years, turned the world upside down and dramatically transformed our lives. Now, the Pulitzer Prize-winning author of *The Prize* joins with a leading expert on the new marketplace to explain the revolution in ideas that is reshaping the modern world. Written with the same sweeping narrative power that made *The Prize* an enormous success, *The Commanding Heights* provides the historical perspective, the global vision, and the insight to help us understand the tumult of the past half century. Trillions of dollars in assets and fundamental political power are changing hands as free markets wrest control from government of the "commanding heights" -- the dominant businesses and industries of the world economy. Daniel Yergin and Joseph Stanislaw demonstrate that words like "privatization" and "deregulation" are inadequate to describe the enormous upheaval that is unfolding before our eyes. Along with the creation of vast new wealth, the map of the global economy is being redrawn. Indeed, the very structure of society is changing. New markets and new opportunities have brought great new risks as well. How has all this come about? Who are the major figures behind it? How does it affect our lives? The collapse of the Soviet Union, the awesome rise of China, the awakening of India, economic revival in Latin America, the march toward the European Union -- all are a part of this political and economic revolution. Fiscal realities and financial markets are relentlessly propelling deregulation; achieving a new balance between government and marketplace will be the major political challenge in the coming years. Looking back, the authors describe how the old balance was overturned, and by whom. Looking forward, they explore these questions: Will the new balance prevail? Or does the free market contain the seeds of its own destruction? Will there be a backlash against any excesses of the free market? And finally, *The Commanding Heights* illuminates the five tests by which the success or failure of all these changes can be measured, and defines the key issues as we enter the twenty-first century. *The Commanding Heights* captures this revolution in ideas in riveting accounts of the history and the politics of the postwar years and compelling tales of the astute politicians, brilliant thinkers, and tenacious businessmen who brought these changes about. Margaret Thatcher, Donald Reagan, Deng Xiaoping, and Bill Clinton share the stage with the "Minister of Thought" Keith Joseph, the broommaker's son Domingo Cavallo, and Friedrich von Hayek, the Austrian economist who was determined to win the twenty-year "battle of ideas." It is a complex and wide-ranging story, and the authors tell it brilliantly, with a deep understanding of human character, making critically important ideas lucid and accessible. Written with unique access to many of the key players, *The Commanding Heights*, like no other book, brings us an understanding of the last half of the twentieth century -- and sheds a powerful light on what lies ahead in the twenty-first century.
