Best Practices for Teaching Beginnings and Endings in the Psychology Major Dana S. Dunn 2010-01-12 Introductory and capstone experiences in the undergraduate psychology program are crucial ways to engage students in their major and psychology department, impart realistic expectations, and prepare them for life beyond college. Providing the right orientation and capstone courses in psychology education is increasingly a concern of instructors, department chairs, program directors, and deans, and both types of courses have become important sources for gathering pre- and post-coursework assessment data for degree learning outcomes. The strategies presented here have been designed to help educators examine issues around teaching the introductory or careers course and developing a psychology-specific orientation program. The authors also provide concrete suggestions for building capstone experiences designed to fit the needs of a department, its pedagogical philosophy, or the educational agenda of the college or university. Undergraduate psychology curriculum designers and instructors can benefit from learning innovative and effective strategies for introducing the major to first-year students and, at graduation, for bringing closure, reinforcing the overall departmental learning outcomes, and helping students apply their disciplinary knowledge in capstone experiences and post-graduate life. In this collection of articles, psychology instructors involved in the improvement of teaching and learning review the research and share their own successes and challenges in the classroom. Discussions include effective practices for helping students become acclimated to and engaged in the psychology major, application of developmental knowledge and learning communities to course design, and use of quality benchmarks to improve introductory and capstone courses. Other chapters describe innovations in the design of stand-alone courses and offer concrete advice on counseling psychology graduates about how to use what they have learned beyond their higher education experiences.

Translationality Douglas Robinson 2017-05-18 This book defines "translationality" by weaving a number of sub- and interdisciplinary interests through the medical humanities: medicine in literature, the translational history of medical literature, a medical (neuroscience) approach to literary translation and translational hermeneutics, and a humanities (phenomenological/performative) approach to translational medicine. It consists of three long essays: the first on the traditional medicine-in-literature side of the medical humanities, with a close look at a recent novel built around the Capgras delusion and other neurological misidentification disorders; the second beginning with the traditional history-of-medicine side of the medical humanities, but segueing into literary history, translation history, and translation theory; the third on the social neuroscience of translational hermeneutics. The conclusion links the discussion up with a humanistic (performative/phenomenological) take on translational medicine.

Writing: A User Manual David Hewson 2012-02-16 You are a writer and you have a killer book idea. When your project starts to take off you will find yourself managing a writhing tangle of ideas, possibilities and potential potholes. How do you turn your inspiration into a finished novel? Writing a User's Manual offers practical insight into the processes that go into writing a novel, from planning to story development, research to revision and, finally, delivery in a form which will catch the eye of an agent or publisher. David Hewson, a highly productive and successful writer of popular fiction with more than sixteen novels in print in twenty or so languages, shows how to manage the day to day process of writing. Writers will learn how to get the best out of software and novel writing packages such as Scrivener, which help you view your novel not as one piece of text, but as individual linked scenes, each with their own statistics, notes and place within the novel structure. As you write, you will need to assemble the main building blocks to underpin your artistry : story structure; genre - and how that affects what you write; point of view; past, present or future tense; software for keeping a book journal to manage your ideas, research and outlining; organization and more. The advice contained in this book could mean the difference between finishing your novel, and a never-ending work in progress. An essential tool for writers of all kinds. Foreword by Lee Child.

Research and Evaluation for Busy Practitioners Helen Kara 2012 More and more people working in public services have to do research on top of their main jobs. This can include workplace research, such as evaluation, audit, training needs analysis or satisfaction surveys, or research for a professional development qualification such as diploma, master's degree or PhD. Unlike most how-to books that treat research as if it exists in isolation, this book will show you how to juggle research, work, family, and social life. Based on interviews with practitioners from health, education, social care, criminal justice, government and the third sector, as well as the author's extensive experience, it provides a wealth of practical information and tips to save you time, effort and stress. This book is for anyone in the public or third sector, an independent research organisation or academia, who wants to know how to do research on top of their main job and still have a life. The book is supported by a companion website, containing additional materials for both students and lecturers, which is available from the link above.

Cognition and Comprehension in Translational Hermeneutics John STANLEY 2021-06-01 The fundamental aim of translation studies in general is to better understand the practice of translation. Insofar as hermeneutics can be regarded as an approach to understanding the nature of understanding itself (and in this it finds alliances with phenomenology), the task of this volume is to demonstrate that hermeneutics can accordingly provide a means to better apprehend the subtle complexities of translation. At issue are translators' myriad decisions, reactions, negotiations and compromises as they practice their craft. At stake is translation knowledge – what translators must know, how they know what they know, and how such savoir faire is deployed in specific instances of translation. Essays in this volume address the somatic and the cognitive, questions of experience and expertise, empirical practice, methodological protocols and suitable philosophical models in order to gain better insight into the challenging task of the translator. An additional highlight of this volume is the sustained assessment of Fritz Paepcke, one of the pioneers of what, today, is called translational hermeneutics, Paepcke being a scholar who proposed new ways to consider the delicate, but necessary negotiation between translation theory and translation practice. The Fourth Age Byron Reese 2020-03-17 As we approach a great turning point in history when technology is poised to redefine what it means to be human, The Fourth Age offers fascinating insight into AI, robotics, and their extraordinary implications for our species. "If you only read just one book about the AI revolution, make it this one" (John Mackey, cofounder and CEO, Whole Foods Market). In The Fourth Age, Byron Reese makes the case that technology has reshaped humanity just three times in history: 100,000 years ago, we harnessed fire, which led to language; 10,000 years ago, we developed agriculture, which led to cities and warfare; 5,000 years ago, we invented the wheel and writing, which lead to the nation state. We are now on the doorstep of a fourth change brought about by two technologies: AI and robotics. "Timely, highly informative, and certainly optimistic" (Booklist), The Fourth Age provides an essential background on how we got to this point, and how—rather than what—we should think about the topics we'll soon all be facing: machine consciousness, automation, changes in employment, creative computers, radical life extension, artificial life, AI ethics, the future of warfare, superintelligence, and the implications of extreme prosperity. By asking questions like "Are you a machine?" and "Could a computer feel anything?," Reese leads you through a discussion along the cutting edge in robotics and AI, and provides a framework by which we can all understand, discuss, and act on the issues of the Fourth Age and how they'll transform humanity.
