*Engaging Employers in Apprenticeship Opportunities*  
International Labour Organization 2017 This joint OECD-ILO publication provides guidance on how local and regional governments can foster business-education partnerships

in apprenticeship programmes and other types of work-based learning, drawing on case studies across nine countries. There has been increasing interest in apprenticeships which combine on the job training with classroom-based study, providing a smooth transition from

school to work. There are benefits to both individuals and employers from participating in apprenticeships, including increased productivity and job quality. Successful implementation is contingent on having a high level of employer engagement at the local level, notably in the design, development and delivery of programmes.

thermodynamics, heat transfer, and fluid mechanics. Following an overview of the history of refrigeration, subsequent chapters provide exhaustive coverage of the principles, applications and design of several types of refrigeration systems and their associated components such as compressors, condensers, evaporators, and expansion devices. Refrigerants too, are studied elaboratively in an exclusive chapter. The second part of the book, beginning with the historical background of air conditioning in Chapter 15, discusses the subject of psychrometrics being at the heart of understanding the design and implementation of air conditioning processes and systems, which are subsequently dealt with in Chapters 16 to 23. It also

explains the design practices followed for cooling and heating load calculations. Each chapter contains several worked-out examples that clarify the material discussed and illustrate the use of basic principles in engineering applications. Each chapter also ends with a set of few review questions to serve as revision of the material learned.

**India: Preparation for  
the World of Work**  
Matthias Pilz 2016-01-27  
This book explores how  
the Indian education and  
training system prepares  
young people for the  
world of work and for  
the requirements of the  
employment market –  
because India is a  
leading industrialised  
nation with a very young  
population and a high  
demand for a skilled  
workforce. Indian  
experts write from a  
course-specific  
perspective, offering a  
comprehensive picture of  
educational policy,  
curriculum design and  
cultural  
characteristics. The  
virtual absence of a  
formalised system of  
vocational training in  
India underlines the

importance of this  
research.
