activities to encourage progression and continuity in science' - ESCalate Why do pupils' learning and motivation slow down markedly as they move from primary to secondary school? Why is this situation worse in science than in any other curriculum subject? This book combines reports of and reflection on best practice in improving progression and continuity of teaching and learning in science - particularly at that transition stage between primary and secondary school. Presenting the views of teachers and pupils on progression, learning and application of science, the book suggests practical ways of improving teaching and learning in science. Each chapter includes examples of learning materials with notes on how these might be used or adapted by

teachers in their own classroom settings. Science teaching in secondary schools is often based on assumptions that children know or can do very little, so the job in the secondary school becomes one of showing pupils how to start 'doing science properly', as if from scratch. The damage that this false view can do to pupils' learning, motivation and confidence is clear. This book will help teachers to assess children's prior knowledge effectively and build meaningful and enjoyable science lessons.

*The Linguistic Challenge of the Transition to Secondary School* Alice Deignan 2022-12-30 This book provides a unique analysis and description of

the linguistic challenges faced by school students as they move from primary to secondary school, a major transition, which some students struggle with emotionally and academically. The study: • draws on a bespoke corpus of 2.5 million words of written materials and transcribed classroom recordings, provided by the project's partner schools; • combines quantitative and qualitative approaches to the corpus data to explore linguistic variation across school levels, registers and subjects; • describes the procedures of corpus compilation and analysis of written and spoken academic language, showing how modern corpus tools can be applied to this far-reaching social and educational issue; • uncovers differences and similarities between the academic language that

school children are exposed to at primary and secondary school, contrasting this against the backdrop of the non-academic language that they encounter outside school. This book is important reading for advanced students and researchers in corpus linguistics, applied linguistics and teacher education. It carries implications for policymakers and schools looking to support students at this critical point in their schooling.
