Global Mobile Satellite Communications Stojce

Dimov Ilcev 2005-12-05 Global mobile satellite
communications (GMSC) are specific satellite
communication systems for maritime, land and
aeronautical applications. It enables connections
between moving objects such as ships, vehicles and
aircrafts, and telecommunications subscribers
through the medium of communications satellites,
ground earth stations, PTT or other landline
telecommunications providers. Mobile satellite
communications and technology have been in use
for over two decades. Its initial application is aimed
at the maritime market for commercial and distress

applications. In recent years, new developments and initiatives have resulted in land and aeronautical applications and the introduction of new satellite constellations in non-geostationary orbits such as Little and Big LEO configurations and hybrid satellite constellations as Ellipso Borealis and Concordia system. This book is important for modern shipping, truck, train and aeronautical societies because GMSC in the present millennium provides more effective business and trade, with emphasis on safety and commercial communications. Global Mobile Satellite Communications is written to make bridges between potential readers and current GMSC trends, mobile system concepts and network architecture using a simple mode of style with understandable technical information, characteristics, graphicons, illustrations and mathematics equations. Global Mobile Satellite Communications represents telecommunications

technique and technology, which can be useful for all technical staff on vessels at sea and rivers, on all types of land vehicles, on planes, on off shore constructions and for everyone possessing satellite communications handset phones.
