He does not even recognise his face in the mirror. It is as if he has dropped out of the flow of life. Slowly, uncontrollably, the memories return to him, and Arvid struggles under the weight of the tragedy which has blighted his life - the death of his parents and younger siblings in an accident six years previously. Dancers Edgar Degas 1956*

The Book of L G. Rozenberg 2012-12-06 This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L. Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.

Joy Christian Wiman 2017-11-07 One hundred of the most evocative modern poems on joy, selected by an award-winning contemporary poet "Bursting with energy and surprising locutions. . . . Even the most familiar poets seem somehow new within the context of Joy."--David Skeel, Wall Street Journal "Wiman takes readers through the ostensible ordinariness of life and reveals the extraordinary."--Adrianna Smith, The Atlantic Christian Wiman, a poet known for his meditations on mortality, has long been fascinated by joy and by its relative absence in modern literature. Why is joy so resistant to language? How has it become so suspect in our times? Manipulated by advertisers, religious leaders, and politicians, joy can seem disquieting, even offensive. How does one speak of joy amid such ubiquitous injustice and suffering in the world? In this revelatory anthology, Wiman takes readers on a profound and surprising journey through some of the most underexplored terrain in contemporary life. Rather than define joy for readers, he wants them to experience it. Ranging from Emily Dickinson to Mahmoud Darwish and from Sylvia Plath to Wendell Berry, he brings together diverse and provocative works as a kind of counter to the old, modernist maxim "light writes white"--no agony, no art. His rich selections awaken us to the essential role joy plays in human life.

USB Embedded Hosts Jan Axelson 2011-11-01 Developers who want to access USB devices from their embedded systems will find a helpful resource in *USB Embedded Hosts: The Developer's Guide*. This new book from the author of *USB Complete* shows how small systems can take advantage of the same wealth of USB devices available to conventional PCs. The book begins with a review of USB host communication protocols. Readers then learn which USB host requirements are relaxed for embedded systems and what new requirements some embedded systems must meet. To help in selecting a development platform, the book explores available hardware and software for USB host communications in small systems. The heart of the book focuses on communicating with USB devices. The topics (with example code) include USB drives, keyboards, virtual serial ports, network bridges, mics, speakers, video cameras, and printers, plus devices that don't fit defined USB classes. Also discussed are systems that support both USB host and device functions. The example code is written for the BeagleBoard-xM open development board using a distribution of Linux targeted to small systems. Also covered is how to use Linux commands and utilities to learn about, monitor, and debug communications

with USB devices.
