**The Polemic of the Pastorals** Lloyd Pietersen 2004-05-27 Much historical-critical work on the opponents in the Pastoral Epistles has resulted in sweeping generalizations concerning their Jewish and/or Gnostic nature. Literary analyses have been somewhat more promising in focusing on the stereotypical nature of the polemic, but either fail to do justice to the urgency of the language in the Pastorals or do not provide a convincing description of the opponents. Here Pietersen approaches the problem of the opponents from a socio-scientific perspective. Utilizing labeling theory and social control theory from the sociology of deviance, he argues that the Pastorals function as a literary version of a status degradation ceremony whereby previously influential insiders within the community are transformed into outsiders.

**Nonequilibrium Hypersonic Aerothermodynamics** Chul Park 1990-03-01 Describes the interaction between the fluid flow and the high temperature phenomena experienced in the hypersonic regime. Presents the principles of aerothermodynamics in nonequilibrium hypersonic flow regimes, covering theory, application and surface phenomena. Chapters 1 to 5 explain how to develop computational fluid dynamics (CFD) techniques for computing nonequilibrium, chemically reacting flows in the hypersonic regime. **Engineering a Safer World** Nancy G. Leveson 2012-01-13 A new approach to safety, based on systems thinking, that is more effective, less costly, and easier to use than current techniques. Engineering has experienced a technological revolution, but the basic engineering techniques applied in safety and reliability engineering, created in a simpler, analog world, have changed very little over the years. In this groundbreaking book, Nancy Leveson proposes a new approach to safety—more suited to today's complex, sociotechnical, software-intensive world—based on modern systems thinking and systems theory. Revisiting and updating ideas pioneered by 1950s aerospace engineers in their System Safety concept, and testing her new model extensively on real-world examples, Leveson has created a new approach to safety that is more effective, less expensive, and easier to use than current techniques. Arguing that traditional models of causality are inadequate, Leveson presents a new, extended model of causation (Systems-Theoretic Accident Model and Processes, or STAMP), then shows how the new model can be used to create techniques for system safety engineering, including accident analysis, hazard analysis, system design, safety in operations, and management of safety-critical systems. She applies the new techniques to real-world events including the friendly-fire loss of a U.S. Blackhawk helicopter in the first Gulf War; the Viox recall; the U.S. Navy SUBSAFE program; and the bacterial contamination of a public water supply in a Canadian town. Leveson's approach is relevant even beyond safety engineering, offering techniques for “reengineering” any large sociotechnical system to improve safety and manage risk.

**SIMD Programming Manual for Linux and Windows** Paul Cockshott 2013-03-09 A number of widely used contemporary processors have instruction-set extensions for improved performance in multi-media applications. The aim is to allow operations to proceed on multiple pixels each clock cycle. Such instruction-sets have been incorporated both in specialist DSPchips such as the Texas C62xx (Texas Instruments, 1998) and in general purpose CPU chips like the Intel IA32 (Intel, 2000) or the AMD K6 (Advanced Micro Devices, 1999). These instruction-set extensions are typically based on the Single Instruc tion-stream Multiple Data-stream (SIMD) model in which a single instruction causes the same mathematical operation to be carried out on several operands, or pairs of operands, at the same time. The level or parallelism supported ranges from two floating point operations, at a time on the AMD K6 architecture to 16 byte operations at a time on the Intel P4 architecture. Whereas processor architectures are moving towards greater levels of parallelism, the most widely used programming languages such as C, Java and Delphi are structured around a model of computation in which operations takeplace on a single value at a time. This was appropriate when processors worked this way, but has become an impediment to programmers seeking to make use of the performance offered by multi-media instruction -sets. The introduction of SIMD instruction sets (Peleg et al.

**Engaging the Senses: Object-Based Learning in Higher Education** Helen J. Chatterjee 2016-03-09 The use of museum collections as a path to learning for university students is fast becoming a new pedagogy for higher education. Despite a strong tradition of using lectures as a way

of delivering the curriculum, the positive benefits of ‘active’ and ‘experiential learning’ are being recognised in universities at both a strategic level and in daily teaching practice. As museum artefacts, specimens and art works are used to evoke, provoke, and challenge students’ engagement with their subject, so transformational learning can take place. This unique book presents the first comprehensive exploration of ‘object-based learning’ as a pedagogy for higher education in a broad context. An international group of authors offer a spectrum of approaches at work in higher education today. They explore contemporary principles and practice of object-based learning in higher education, demonstrating the value of using collections in this context and considering the relationship between academic discipline and object-based learning as a teaching strategy.

Gauldin emphasizes the acquisition of writing skills in the contrapuntal discipline and the simulation of sixteenth-century sacred polyphonic idioms in this volume. The author follows a didactic method of a çnon-species or direct¿ approach. While no previous contrapuntal training is necessary to absorb this material, some acquaintance with Baroque polyphonic terminology proves helpful. Key features include: musical examples illustrating specific devices are taken from musical literature or composed by the author; demonstrates the possibility of employing a single given pitch series within the contexts of different compositional techniques; includes a collection of complete or excerpted movements drawn from musical literature at the conclusion of each major textual division; emphasizes Palestrina and the Counter-Reformation sacred style; discusses various compositional procedures of the late Renaissance, including paraphrase, cantus firmus, familiar style, parody, polychoral technique, and chromaticism.

**What does Good Education Research Look Like?** Lyn Yates 2004-03-16 “a powerful, well informed argument for the importance of pluralism... This book will tell young researchers what they need to know about doing educational research; it will encourage experienced researchers to see their own practice in context. It is a profound book that everyone should read.” – Professor Jane Gaskell, Dean, OISE, University of Toronto “This brilliant guide to judging educational research examines the most basic questions about research practice that most people think are settled, and reveals them as problematic... Humorous, sharp, and thoughtful, this readable inquisition explores from differing perspectives ‘what does good education research look like’ in multiple forms including dissertations, journal articles, and grant proposals.” – Sari Knopp Biklen, Laura and Douglas Meredith Professor, Syracuse University, USA This book explains and critically examines some key debates about the quality and value of education research, and shows how it must meet different demands in different places, times and conditions. A major part of the book provides detailed analyses and guidance to different areas in which education research is judged: from academic theses to the press; from highest level competition for prestigious grants to collaborative work with practitioners. Lyn Yates asks probing questions in six education research arenas – the thesis, the research grant application, the journal article, the consultancy application, book publishing, and the press: Who are the judges here? What expectations and networks do they bring to the task? What are the explicit and implicit criteria for good research in that area? What are the common failings? What does good research look like? The book is an indispensable companion to existing textbooks on research methodology. It provides a clear and provocative discourse about the banalities and disorderliness in which education researchers have to operate.
