(Re)Constructing Memory: Textbooks, Identity, Nation, and State James H. Williams 2016-07-08
This book engages readers in thirteen

conversations presented by authors from around the world regarding the role that textbooks play in helping readers imagine membership in the nation. Authors' voices come from a variety of contexts – some historical, some contemporary, some providing analyses over time. But they all consider the changing portrayal of diversity, belonging and exclusion in multiethnic and diverse societies where silenced, invisible, marginalized members have struggled to make their voices heard and to have their identities incorporated into the national narrative. The authors discuss portrayals of past exclusions around religion, ethnicity, sexual orientation, as they look at the shifting boundaries of insider and outsider. This book is thus about “who we are” not only demographically, but also in terms of the past, especially how and whether we teach discredited pasts through textbooks. The concluding chapters provides ways forward in thinking about what can be done to promote curricula that are more inclusive, critical and positively bonding, in increasingly larger and more inclusive contexts.

Textile Technology and Design Abdulkarim Macar 2016-10-01 Textile as a material of daily use has been there for ages now and as an industry, it is

one of the promising industries. Textile Industry will always be there as clothes are one of the basic human necessities. For making textile, there is always the need of textile designers who design the textiles. Textile design is basically the process of creating designs for knitted, woven or printed fabrics. Fabrics can be made by weaving and knitting and can be given basic decoration through printing. Textile designing is a technical process including different methods for production of textile. It includes both- surface design and structural design of a textile. Textile designer must have knowledge of yarn making, weaving, knitting, dyeing, finishing processes, and also knowledge about different types of looms, knitting machines, and printing processes. The designer's deep understanding of the technical aspects of production and the properties of fibers, yarns, and textile dyes help him in visualizing the end product. Textile Technology and Design describes the strategies and technologies that have propelled the forefront of apparel textile innovation. The concept of the textile technologies is intricately related to both, the manufacture and decoration. It addresses the critical role of the interior at the intersection of design and technology, with a range of interdisciplinary arguments by a wide range of contributors: from design practitioners to researchers and scholars.
